Overview

ISS Governance QualityScore is a data-driven scoring and screening solution designed to help institutional investors monitor portfolio company governance. At both an overall company level and along topical classifications covering Board Structure, Compensation, Shareholder Rights, and Audit & Risk Oversight, scores indicate relative governance quality supported by factor-level data. That data, in turn, is critical to the scoring assessment, while historical scores and underlying reasons prompting scoring changes provide greater context and trending analysis to understand a company’s approach to governance over time.

With the continued and growing focus on investor stewardship and engagement, alongside the global convergence of standards and best practices, governance plays an increasingly prominent role in investment decisions. As an extra-financial data screening solution, the ISS Governance QualityScore methodology delivers several key benefits.

Employs robust governance data and attributes. Governance attributes are categorized under four topical categories: Board Structure, Shareholder Rights & Takeover Defenses, Compensation/Remuneration, and Audit & Risk Oversight. ISS Governance QualityScore calls upon a library of more than 225 governance factors across the coverage universe, of which up to approximately 120 are used for any one company (defined by region). ISS Governance QualityScore highlights both potentially shareholder-adverse practices at a company, as well as mitigating factors that help tell a more complete story. The underlying dataset is updated on an ongoing basis as company disclosures are filed, providing the most-timely data available in the marketplace.¹

Incorporates Company Disclosures. Information included in ISS Governance QualityScore includes that drawn from the annual filing of companies’ proxies, annual reports, 10-Ks, circulars, meeting notices, and other publicly disclosed materials related to a company’s annual general meeting (AGM). Those data are augmented by proprietary analytics and information stemming from ISS analyses, interpretations, and proxy voting policies and subsequent recommendations to our clients for these shareholder meetings. While companies have the ability most of the year to submit changes to ISS Governance QualityScore answers, this ability is restricted between the dates when the company files its proxy or meeting materials and the publication of ISS’ proxy analysis for the company’s annual meeting. During the blackout period, the company’s online ISS Governance QualityScore profile and data is frozen and does not reflect the latest information being gathered for the proxy analysis. Once the proxy research report is published and released to ISS’ clients, companies are once again able to review their ISS Governance QualityScore data profiles and provide updates through the Data Verification tool.

The ISS Governance QualityScore profiles available online are updated once daily, at approximately 5am ET (10 AM UTC). Therefore, when the ISS proxy analysis is released containing the updated ISS Governance

¹ Please see Appendix I for more discussion of event-driven updates.
QualityScore scores after the daily update, the online website will not yet reflect these updated scores and information. The updated online score and profile will be viewable the following day after the next daily update.

**Leverages ISS’ global footprint and industry leadership.** ISS Governance QualityScore leverages ISS’ industry leading global footprint, which includes deep legal and language expertise across key global capital markets, including many of those within the coverage universe. Factors used to assess risk-related concerns for a given company in each market are based on the same principles that form the foundation of ISS’ global benchmark voting policy. Developed through an extensive, transparent, and inclusive process, these policies reflect best practices across jurisdictions, as well as the views of institutional investors, issuers, and governance practitioners worldwide. The ISS Governance QualityScore factor methodology is aligned with ISS’ benchmark proxy voting policy to ensure it is up-to-date and tailored to address appropriate variations in governance practices across global capital markets. (For more on ISS benchmark policies and their formulation, visit [www.issgovernance.com/policy](https://www.issgovernance.com/policy).)

**Presents at-a-glance governance rankings relative to index and region.** ISS Governance QualityScore features company-level decile scores, presented as integers from 1 through 10, plus underlying category scores using the same scale that together provide a clear understanding of the drivers of a company’s governance risk. A score in the 1st decile indicates higher quality and relatively lower governance risk, and, conversely, a score in the 10th decile indicates relatively lower quality and higher governance risk. These scores provide an at-a-glance view of each company’s governance risk relative to their index and region. The individual factor breakdown takes a regional approach in evaluating and scoring companies, to allow for company-level comparisons within markets where corporate governance practices are similar.

**Provides global governance factor comparability.** In 2017, ISS Governance QualityScore refined its in-depth regional focus to include more factors that are applicable across all markets. The number of global core factors currently stand at 30 overall, applicable to at least 29 countries. The global core factors provide more data to assess and benchmark governance risk, allow for an increased gradation in scoring, and results in more comprehensive governance profiles. The methodology ensures that companies within a given region/country have a core base of factors that are comparable to other companies globally, to provide greater benchmarking capabilities.

For further information on Governance QualityScore methodology, please review our website: [https://www.issgovernance.com/solutions/qualityscore/](https://www.issgovernance.com/solutions/qualityscore/) or submit a case to the ISS Help Desk: [https://issgovernance.service-now.com/csp](https://issgovernance.service-now.com/csp)
Coverage

ISS Governance QualityScore global coverage comprises approximately 5,800 publicly traded companies in 30 markets, including constituents of the following major indices: S&P 500, Russell 3000, S&P/TSX Composite, STOXX600, ASX 200, NZX15, Nikkei 400, and local European market indices including the U.K. FTSE All-Share (excluding investment trusts.) ISS Governance QualityScore also includes widely held companies in ISS’ coverage universe for Brazil, China, Hong Kong, and India. The term "widely held" refers to companies that ISS designates as such based on their membership in a major index and/or the number of ISS clients holding the securities.

Coverage Adjustments

The ISS Governance QualityScore universe undergoes periodic coverage updates to reflect changes in the underlying index constituents. Most ex-US markets are updated annually in January to reflect year-end index rebalancing. Therefore, in most markets, changes are held until the beginning of the year, with a notable exception being the U.S. Russell 3000, which takes place in early July after its annual index reconstitution in June. The following markets have a more frequent rebalance schedule; however, except for delistings or mergers, potential index drops are held until year-end (July for Russell 3000) to minimize volatility in the coverage universe.

Coverage Adjustment Notes:

› ISS, at its discretion, will exclude companies from the ISS Governance QualityScore coverage universe if they do not meet ISS’ requirements for data collection or disclosure. In most cases, Foreign Private Issuers are withheld from coverage.
› ISS may retain a limited number of publicly traded companies that would have otherwise been dropped from coverage in order to minimize volatility in the coverage universe and meet the needs of its clients.
› While new companies are added to the coverage universe per the above schedule, scores will not be available until all ISS Governance QualityScore factors are collected (generally after the company files its next annual proxy, annual report, or meeting circular).
› Private and inactive companies are removed from the scored universe as soon as they are determined to be no longer publicly traded.

Summary of Updates

The ISS Governance QualityScore annual methodology review ensures the approach remains closely aligned with the ISS’ benchmark voting policies and reflect developments in regulatory and market practices.

November 2018 Methodology Updates

Effective November 29, 2018, all regions will see several updates, including a new Board Structure subcategory focusing on Board and C-Suite diversity. Four new factors and five existing factors will be included in the new Diversity subcategory. Separately, two new Board Controversy factors related to shareholder support for the director elections of the board Chair and CEO will be added in most regions to identify expressed shareholder satisfaction with company leadership. Two existing factors will be moved to Board Controversies. Additionally, recently added factors in Australia identifying the lowest level of Director support and the shareholder vote support for the most recent Say on Pay / Remuneration proposal will be added to applicable regions to further aid in identifying shareholder concerns. Two existing factors will move to Compensation Controversies. Additional updates can be found in the addendum starting on page 166.

New Factors as of November 29, 2018:

Board Structure (Controversies)

› What was the percentage of vote support for the CEO at the most recent annual meeting? (Q391); All regions except Japan.
› What was the percentage of vote support for the Board Chair at the most recent annual meeting? (Q392); All regions except Japan.
Board Structure (new Diversity subcategory)

› How many women serve in leadership roles on the board? (Q386); All regions except Japan.
› How many women are named executive officers at the company? (Q387); US, Canada, Anglo*, and Australia*.
› What is the standard deviation of director age? (Q388); All regions except Japan.
› What is the standard deviation of director tenure (in years)? (Q389)*; All regions except Japan.

The new Diversity subcategory will also include the following existing factors:

› What proportion of non-executive directors on the board has lengthy tenure? (Q13)
› How many women are on the board? (Q304)
› What is the proportion of women on the board? (Q354)
› Does the board have any mechanisms to encourage director refreshment? (Q349)*
› What proportion of non-executive directors has been on the board less than 6 years? (Q355)

Application of Existing Factors to New Markets:

Board Structure

› What was the lowest percentage of vote support received by management-nominated directors at their most recent annual meeting? (Q383); add US, Canada, Anglo, W. Europe, Germanic, S. Europe, Nordic, AsiaPac, India, S. Korea*, Latin America, and Africa.
› How many directors serve on an excessive number of outside boards? (Q309); add India and S. Korea.
› Has ISS determined that the board had problematic governance practices that reduced shareholder rights? (Q345); add Hong Kong, Singapore, and China.

Compensation

› What was the percentage of vote support received from shareholders on the most recent Say-on-Pay or remuneration proposal? (Q385); add US, Canada, Anglo, W. Europe, and Africa.
› Does the company disclose a performance measure for restricted share or stock award plans for executives? (Q123); add India.
› Did the company grant a one-off reward to any of its executives? (Q159); add Germanic.

Audit

› Has the company disclosed any material weaknesses in its internal controls in the past two years? (Q8); add India.
› Has the company changed its audit firm without valid reason in the past two fiscal years? (Q288); add India.
*Indicates this factor is unscored for the respective region

Appendix II includes a complete listing of all ISS Governance QualityScore factors alongside their market applicability.

Appendix III shows factor listings by market and region. The rationale and guidelines for all ISS Governance QualityScore factors are detailed below.

Scoring Methodology

ISS Governance QualityScore rests on a scoring methodology built and tested by ISS’ global team of governance experts and focuses on quantitative and qualitative aspects of regional governance best practices as well as the analysis undergirding ISS voting policies and voting recommendations. A score in the 1st decile indicates relatively higher quality and relatively lower governance risk, and, conversely, a score in the 10th decile indicates relatively lower quality and higher governance risk.

The 1-10 score is a relative measure based on the raw score calculations of companies in the same index or region. This process is conducted at each topical category and overall company score levels. Each topical category, as well as the overall company score, generates an independent range of scores and the resulting decile rankings. For example, raw scores for S&P 500 U.S. companies are ranked and grouped into deciles, with the first decile (designated with a “1”) being indicative of a higher raw score and lower governance risk. See the hypothetical example in the table below.

Table 5: Score Methodology Example

</tbody>
</table>

The Audit & Risk Oversight category decile scoring differs from the other categories. While the methodology is reviewed on an ongoing basis to strengthen the analysis of governance risk, there are a limited number of
prevalent risk factors or controversies in the Audit and Risk Oversight category. Consequently, ISS Governance QualityScore does not assign a 1-10 rank for companies where practices are similar or “force rank” to ensure companies are in each of the 1-10 decile scores. In most ISS Governance QualityScore regions, the Audit scores are limited to a few relevant deciles only. The audit deciles were last updated March 2019 for US, Canada, Japan, Nordic, and Latin America.

ISS Governance QualityScore Factor Criteria

There are more than 225 factors analyzed under ISS Governance QualityScore, with the specific factors under analysis varying by region. The following section details the questions analyzed and rationale for inclusion in the factor methodology. The parenthetical number associated with each question is the ISS question identification number, which is highlighted for easy reference throughout related documentation and product tools.

The complete ISS Governance QualityScore methodology and market applicability is detailed in Appendices II and III.

Board Structure Category

Board Composition

▶ How many directors serve on the board? (Q9)

› In general, the investment community expects that boards should not be so large that they become inefficient and hinder decision-making. Generally, boards should not have fewer than six members or more than 15 members. A board of between nine and 12 board members is considered ideal.
› This question will consider the total number of directors on the board or whether no information is disclosed.
› This factor has a zero-weight impact on the scoring model for U.S. companies and is included for informational purposes only.

Market Applicability: All regions

▶ What percentage of the board is independent based on an ISS local market classification? (Q10)

› This factor evaluates board independence, where the definition of independence (according to ISS) is universal across markets. Local standards will be taken into account in the scoring and consider nuances including whether or not the company is controlled, has a Higgsian Chair, or if board members are elected by shareholders. The proportion of independent directors on a board is viewed by many as critical to firm performance. For instance, a working paper which evaluated the link between board composition and
company productivity found a positive relationship between the percentage of outsiders on so-called monitoring committees (i.e., audit, compensation, and nominating committees) and the factors associated with the benefits of monitoring. These factors included the firm’s outstanding debt and free cash flow (Klein). Another study found a significant correlation between board independence and firm performance as measured by Return on Assets (Elgaied & Rachdi 2008). Other researchers found a positive link between enhanced firm value and boards which have audit committees that are composed of a majority of independent finance-trained directors (Chan & Li 2008).

Directors with ties to management may be less willing and able to effectively evaluate and scrutinize company strategy and performance. Furthermore, boards without adequate independence from management may have inherent conflicts of interest.

Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. In many markets, a board lacking a majority of independent members will raise significant concerns.

In order to distinguish between recommendations for FTSE 350 and ISEQ 20 companies and other companies within the Anglo Region, percentages of independent members will be analyzed for the constituents of the above mentioned indices, and numbers of independent members will be analysed for non-constituents.

In the Anglo market a Higgsian Chair is included in the independence calculation and is marked in the answer.

For the Brazilian market, a distinction will be made between constituents of the various listing segments to take into account different best practice recommendations. A minimum of 30% board independence for Novo Mercado and Nivel 2 companies is expected, and a minimum of 1 independent director is expected for companies traded under the other listing segments.

For the African market, the question will consider the independence of non-executive directors.

For the Canadian market, ISS Governance QualityScore will not penalize a majority owned company where board independence level is below 50 percent; as long as the company qualifies for majority controlled exemption. A majority owned company is defined for the purpose of this policy as a company controlled by a shareholder or group of shareholders who together have an economic ownership interest under a single class common share capital structure that is commensurate with their voting entitlement of 50 percent or more of the outstanding common shares. Such company is deemed to enjoy majority controlled exemption if it meets certain independence and governance criteria as outlined in the Canada Proxy Voting Guidelines.

In Western and Southern Europe regions where companies have a controlling shareholder, ISS applies different minimum standards of independent representation on the board of controlled companies. ISS accepts that independence below 50 percent is standard in some markets.

In markets such as Nordic, Western Europe, and Germanic, ISS Governance QualityScore takes into account all directors regardless of classification (shareholder representative, employee representative, employee shareholder representative, government represented). A board lacking a third of independent members will raise significant concerns.

Market Applicability: All regions
What percentage of the board is independent, based on an ISS global classification? (Q378)

- This factor evaluates board independence based on a uniform ISS definition across most markets, versus Q10, which takes into account local market nuances. The global classification uses a U.S. centric definition for determining independence (with exceptions noted below), but provides more global comparability across markets. ISS Governance QualityScore will consider director classifications (as defined by ISS) of “Independent Outsider” and “Independent – NonExecutive Director” as “Independent”. Unclassified board members are excluded from the total number of board members. Shareholder nominees are excluded from both independent and total board member calculations. Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. In many markets, a board lacking a majority of independent members will raise significant concerns.
- This factor considers if a company has a two-tiered board in Germany, Austria, France, and Netherlands.
- The proportion of independent directors on a board is viewed by many as critical to firm performance. For instance, a working paper which evaluated the linkage between board composition and company productivity found a positive relationship between the percentage of outsiders on so-called monitoring committees (i.e., audit, compensation, and nominating committees) and the factors associated with the benefits of monitoring. These factors included the firm’s outstanding debt and free cash flow (Klein). Another study found a significant correlation between board independence and firm performance as measured by Return on Assets (Elgaied & Rachdi 2008). Other researchers found a positive link between enhanced firm value and boards which have audit committees that are composed of a majority of independent finance-trained directors (Chan & Li 2008).
- Directors with ties to management may be less willing and able to effectively evaluate and scrutinize company strategy and performance. Furthermore, boards without adequate independence from management may have inherent conflicts of interest.
- In order to distinguish between recommendations for FTSE 350 and ISEQ 20 companies and other companies within the Anglo Region, percentages of independent members will be analysed for the constituents of the above mentioned indices, and numbers of independent members will be analysed for non-constituents. Shareholder nominees are excluded from both calculations.
- For China, shareholder nominees are included in the calculation.
- For Russia, new Management nominees and shareholder nominees are excluded from consideration.

Market Applicability: All regions excluding Japan

How many outside directors are on the board? (Q289)

- Japan government revised the Companies Act, which essentially gives firms little alternative but to appoint outside directors. The legislation, states that large companies must explain the downsides of appointing outside directors to shareholders if they opt not to acquire any. Similarly, the nonbinding corporate governance code, which was drafted by a panel of experts under the Financial Services Agency and the TSE,
urges companies listed in the first and second sections of the country’s stock exchanges to have at least two outside directors.

Market Applicability: Japan

What is the outside director composition of the board? (Q282)

Japanese boards are often dominated by company insiders, and though an outside director may lack independence, a meaningful presence of outside directors on the board could enhance the board’s monitoring and oversight abilities.

Market Applicability: Japan

What is the independent statutory auditor’s composition? (Q281)

The board of statutory auditors in Japan is responsible for monitoring the company’s financial reporting and auditing practices as well as the board of directors’ compliance. Therefore, the board of statutory auditors should have high level of independence to ensure accurate and reliable financial disclosure and adherence to the law by directors. ISS Governance QualityScore will measure the proportion of independent statutory auditors according to ISS policy.

Market Applicability: Japan

What is the classification of the Board Chair?(Q14)

An independent chair of the board is broadly considered best practice. As noted in a 2009 policy brief published by Yale University’s Millstein Center for Corporate Governance and Performance, the “independent chair curbs conflicts of interest, promotes oversight of risk, manages the relationship between the board and CEO, serves as a conduit for regular communication with shareowners, and is a logical next step in the development of an independent board.”

Specifically in the Canada markets, National Policy 58-201 Corporate Governance Guidelines recommends that the chair of the board should be an independent director. Where this is not appropriate, an independent director should be appointed to act as “lead director.” However, either an independent chair or an independent lead director should act as the effective leader of the board and ensure that the board’s agenda will enable it to successfully carry out its duties.

This question will consider the classification of the chair of the board according to ISS policy, outlining whether he / she is independent, an executive, or if the chair of the board has not been appointed.
In Japan, a distinction will be made between the chair of the board (議長 gicho) and the chair of the company (会長 kaicho). This question will consider whether the chair of the board is an insider or an outside director based on the company’s corporate governance report.

Market Applicability: All regions.

Has the company identified a Senior Independent Director or an independent Lead Director? (Q16)

A lead independent director provides an important leadership function for a board with a combined CEO/chair structure. An effective lead director’s functions generally include, but are not limited to, the following: presides at all meetings of the board at which the chair is not present, including executive sessions of the independent directors; serves as liaison between the chair and the independent directors; approves information sent to the board; approves meeting agendas for the board; approves meeting schedules to assure that there is sufficient time for discussion of all agenda Items; has the authority to call meetings of the independent directors; and if requested by major shareholders, ensures that he is available for consultation and direct communication.

This question addresses whether there is a position of a lead independent director with clearly delineated and comprehensive duties.

For the U.S., a lead independent director or a presiding director will be considered if one director serves in that capacity for at least one year. A position that rotates among members of the board within the year will not be considered.

The presence of a lead independent director will mitigate to some degree concerns raised by a non-independent chair or combined CEO-chair structure. The absence of a lead independent director will raise a small additional degree of concern and a non-independent lead director slightly less.

This question will consider the independence of the lead director according to ISS policy, or if the lead director of the board has not been appointed. In the case where there is an independent chair (and thus no lead independent director), this question will not be applicable.

Market Applicability: All regions excluding Japan.

Has the company appointed a Lead Independent Director or established other ways of effective collaboration between independent directors, management, and statutory auditors in compliance with the Japanese Corporate Governance Code 4-8-2? (Q367)

In Japan, the chair of the company (kaicho) is at the helm of the company (who is often a former CEO of the company) but does not always chair the board. Even when a company has the chair of the company as a distinct role separate from the CEO, such a role may be symbolic or honorary position, and the CEO may still chair the board. From the perspective of the separation of CEO and chair, it is more appropriate in Japan to examine the separation of CEO and the chair of the board (gicho).
The lead director serves as an independent chief among all board members and thereby helps ensure board relations run smoothly. Lead directors drive high-performance boards. Lead directors may improve board performance by facilitating board discussions, by helping directors reach consensus, and by keeping board matters on track. The Japanese Corporate Governance Code recognizes the importance of lead independent directors and believes that its presence could help facilitate oversight and collaboration among different governing bodies. However, the Code also allows companies to achieve similar oversight mechanism through other unspecified means, and companies are not required to disclose whether it has a lead independent director or not. Therefore, this question will examine the compliance with the provisions of the Code 4-8-2.

Market applicability: Japan

What is the term of mandate proposed for supervisory board members at the latest general meeting? (Q17)

Director term lengths can affect the ability of shareholders to issue regular opinions about the composition of the board. In general, a one-year mandate is considered best practices, but ISS recognizes that market practice in some markets is for a three-year term, and will not penalize a company if the director mandate is for three years or less.

Market Applicability: W. Europe, Nordic, S. Europe

What percentage of the board consists of immediate family members of majority shareholders, executives, and former executives within the past five years? (Q205)

This question elaborates on the general issue of board independence and addresses whether members of the board are related (per the SEC definition of family membership) to any current or former officers (five year cooling-off period) or significant shareholders of the company. Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. This factor has a zero-weight impact on the scoring model and is included for informational purposes only.

Market Applicability: U.S., Latin America, Russia

What percentage of the board consists of former or current employees of the company? (Q206)

This question elaborates on the general question of board independence and addresses whether members of the board are former employees of the company. The definition of former employees follows ISS' classification of directors, which applies a cooling-off period of five years for executives other than the CEO.
Under current ISS policy, a former CEO will always be considered affiliated (more information is available via the ISS Policy Gateway).

› Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings.

› This factor has a zero-weight impact on the scoring model and is included for informational purposes only.

Market Applicability: U.S., Latin America, Russia

Composition of Committees

▶ What percentage of the nominating committee is independent based on an ISS local market classification? (Q19)

› Most nominating committees are responsible for developing a policy on the size and composition of the board and for identifying and approving nominees for vacant positions on the board of directors. The committee should have the benefit of the CEO’s involvement in the selection process, but the responsibility for selection of board nominees should be that of independent directors.

› Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. Nomination committees with less than independent membership as recommended by local best practice will raise increasing levels of concern.

› ISS Governance QualityScore will consider: the percentage of independent members (i.e., as defined by ISS’ proxy voting guidelines); if no information is given; if no committee exists; or if there is no clear nomination process.

› For Japan, ISS Governance QualityScore will additionally consider whether the committee is a formal nominating committee applicable to companies with three-committee structure or a voluntary advisory nominating committee, and will consider the percentage of outside directors on the committee based on the company’s corporate governance report.

› For the Canadian market, ISS Governance QualityScore will not penalize a majority owned company where nominating committee independence level is below 50 percent; as long as the company qualifies for majority controlled exemption. A majority owned company is defined for the purpose of this policy as a company controlled by a shareholder or group of shareholders who together have an economic ownership interest under a single class common share capital structure that is commensurate with their voting entitlement of 50 percent or more of the outstanding common shares. Such company is deemed to enjoy majority controlled exemption if it meets certain independence and governance criteria as outlined in the Canada Proxy Voting Guidelines.

Market Applicability: All regions

▶ Are there Company executives on the nominating committee? (Q306)
ISS Governance QualityScore

Overview and Updates

This question will consider whether there are any company executives on the nominating committee. Most nominating committees are responsible for developing a policy on the size and composition of the board and for identifying and approving nominees for vacant positions on the board of directors. The committee should have the benefit of the CEO’s views in its selection process, but the responsibility for selection of board nominees should be that of independent directors.

Market applicability: All regions except Japan

What is the classification of the chair of the nominating committee? (Q23)

Most nominating committees are responsible for developing a policy on the size and composition of the board and for identifying and approving nominees for vacant positions on the board of directors. The committee should have the benefit of the CEO’s involvement in the selection process, but the responsibility for selection of board nominees should be that of independent directors.

ISS Governance QualityScore will consider whether the committee chair is an executive, affiliated non-executive, insider, outsider, non-director committee member or independent. ISS Governance QualityScore also will consider whether there is, as disclosed explicitly by the company, a chair as well as a committee.

Market Applicability: All regions

What percentage of the compensation committee is independent based on an ISS local market classification? (Q25)

The compensation committee makes recommendations and sets guidelines for the compensation of executives of the company. Best practice dictates that the panel should be composed solely of independent directors.

ISS Governance QualityScore will consider: the percentage of independent members (as defined by ISS’ proxy voting guidelines); if no information is given; if no committee exists; or if there is no clear nomination process.

Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. Compensation committees with less independent membership as recommended by local best practice raises concern of governance risk.

For Japan, ISS Governance QualityScore will additionally consider whether the committee is a formal compensation committee applicable to companies with three-committee structure or a voluntary advisory nominating committee, and will consider the percentage of outside directors on the committee based on the company’s corporate governance report.

For the Canadian market, ISS Governance QualityScore will not penalize a majority owned company where compensation committee independence level is below 50 percent; as long as the company qualifies for majority controlled exemption. A majority owned company is defined for the purpose of this policy as a
company controlled by a shareholder or group of shareholders who together have an economic ownership interest under a single class common share capital structure that is commensurate with their voting entitlement of 50 percent or more of the outstanding common shares. Such company is deemed to enjoy majority controlled exemption if it meets certain independence and governance criteria as outlined in the Canada Proxy Voting Guidelines.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, S. Europe, AsiaPac, Australasia, Africa, Russia, S. Korea, India, Japan

Are there executives on the compensation committee? (Q27)

The compensation committee makes recommendations and sets guidelines for the compensation of executives of the company. Best practice dictates that the panel should be composed solely of independent directors. When executives are member of the compensation committee, there is a conflict of interest. This question will consider whether there are any executives on the compensation committee.

Applicability: U.S., Canada, Anglo, W. Europe (Portugal*), Germanic, S. Europe, Nordic, Australasia, AsiaPac, S. Korea, Latin America, Africa, India

What is the classification of the chair of the compensation committee? (Q28)

The compensation committee makes recommendations and sets guidelines for the compensation of executives of the company. Best practice dictates that the chair should be an independent director. ISS Governance QualityScore will consider whether the committee chair is an executive, affiliated non-executive, insider, outsider, non-director committee member or independent. ISS Governance QualityScore also will consider whether there is, as disclosed explicitly by the company, a chair as well as a committee.

Market Applicability: All regions (Portugal*)

Is the Board Chair a member of the compensation committee? (Q29)

The compensation committee makes recommendations and sets guidelines for the compensation of executives of the company. Best practice dictates that the panel should be composed solely of independent directors. In particular, the chair of the board may be a member of this committee if he/she was considered independent on appointment as chair. The UK corporate governance code says: “The board should establish a remuneration committee of at least three, or in the case of smaller companies two, independent non-executive directors. In addition the company chair may also be a member of, but not chair, the committee if he or she was considered independent on appointment as chair. The remuneration committee should make available its terms of
reference, explaining its role and the authority delegated to it by the board. Where remuneration consultants are appointed, they should be identified in the annual report and a statement made as to whether they have any other connection with the company.”

Market Applicability: Anglo

Does the company maintain a formal audit committee? (Q331)

- While some companies maintain a statutory Audit Committee, under Brazilian Corporate Law, most companies have a Fiscal Council, which is a corporate body independent of management and a company’s external auditors that operates on a permanent or non-permanent basis. The Fiscal Council is generally not equivalent to a U.S. audit committee; its primary responsibility is to monitor management’s activities, review the financial statements, and report its findings to the shareholders.
- Under the Brazilian Corporate Law, the Fiscal Council may not contain members who are members of the Board of Directors or the executive committee, or who are employees of the company or a controlled entity, or a spouse or relative of any member of management.
- While some companies maintain a statutory Audit Committee in addition to a Fiscal Council, the former is not a requirement. Under Rule 10A-3(c)(3) of the U.S. Securities Exchange Act, certain non-U.S. issuers are exempt from the audit committee requirements of Section 303A of the NYSE Listed Company Manual if they establish, according to their local law or regulations, another body that acts as an audit committee.
- ISS Governance QualityScore will consider whether the company has set up a formal audit committee, and whether all of its members are also members of the board of directors.

Market Applicability: Latin America

Does the company maintain a formal fiscal council? (Q332)

- Under Brazilian Corporate Law, the Fiscal Council is a corporate body independent of management and a company’s external auditors that operates on a permanent or non-permanent basis. The fiscal council is generally not equivalent to a U.S. audit committee; its primary responsibility is to monitor management’s activities, review the financial statements, and report its findings to the shareholders.
- Under the Brazilian Corporate Law, the fiscal council may not contain members who are members of the Board of Directors or the executive committee, or who are employees of the company or a controlled entity, or a spouse or relative of any member of management.
- While some companies maintain a statutory audit committee in addition to a fiscal council, the former is not a requirement. Under Rule 10A-3(c)(3) of the Exchange Act, non-U.S. issuers are exempt from the audit committee requirements of Section 303A of the NYSE Listed Company Manual if they establish, according to their local law or regulations, another body that acts as an audit committee.
ISS Governance QualityScore will consider whether the company has set up a fiscal council, and whether it operates on a permanent or non-permanent basis.

Market Applicability: Latin America

What percentage of the audit committee is independent based on an ISS local market classification? (Q31)

- Like other key board committees, audit panels/committees should include only independent non-executives to reduce the risk of conflict of interest with regard to the company’s accounts.
- ISS Governance QualityScore will consider: the percentage of independent members as defined by ISS' policy guidelines; if no information is given; or if no committee exists.
- Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings.
- Audit committees with less independent membership as recommended by local best practice raises the concern of governance risk.
- For the Canadian market, ISS Governance QualityScore will not penalize a majority owned company where audit committee independence level is below 50 percent; as long as the company qualifies for majority controlled exemption. A majority owned company is defined for the purpose of this policy as a company controlled by a shareholder or group of shareholders who together have an economic ownership interest under a single class common share capital structure that is commensurate with their voting entitlement of 50 percent or more of the outstanding common shares. Such company is deemed to enjoy majority controlled exemption if it meets certain independence and governance criteria as outlined in the Canada Proxy Voting Guidelines.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, S. Europe, AsiaPac, Australasia, Africa, Russia, S. Korea, India, Japan

Are there executives on the audit committee? (Q33)

- Like other key board committees, audit panels/committees should include only independent non-executives to reduce the risk of conflict of interest with regard to the company’s accounts.
- Answers will consider whether the company has an audit committee, the presence of executives on the audit committee, whether the composition of the committee has been disclosed, and if so, the composition of the committee.

Market Applicability: All regions except Japan

What is the classification of the chair of the audit committee? (Q34)
Like other key board committees, audit panels should ideally be comprised solely of independent non-executives to ensure no possibility of conflict of interest with regard to the company’s accounts.

ISS Governance QualityScore will consider whether the committee chair is an executive, affiliated non-executive, or independent.

Answers will consider the classification of the chair of the audit committee, whether or not such committee has been set up, and whether the composition of the committee has been disclosed.

Market Applicability: All regions

What governance structure has the company adopted? (Q283)

There are three different types of board structures in Japan; (1) Japanese traditional two-tiered board structure with a board of directors and a board of statutory auditors (監査役会 kansayaku-kai); (2) a unitary board with three committee structure (also known as U.S. style board) with audit, nomination, and compensation committees adopted by a small fraction of Japanese companies; and (3) a unitary board with audit committee structure, a new type of structure introduced in 2015.

Japanese companies can choose among three types of governing structures, and this is a screening question as ISS Governance QualityScore has already scored relavant topics in other questions.

Market Applicability: Japan

Has the company disclosed information on key committee attendance? (Q340)

Directors who do not attend a sufficient number of board and key committee meetings are not fulfilling their obligation to represent shareholders and provide oversight and direction to management.

ISS Governance QualityScore will consider whether or not the company has disclosed information on key committee attendance.

Market Applicability: India

What percentage of the nominating committee is independent, based on an ISS global classification? (Q380)

This factor evaluates nominating committee independence based on a uniform ISS definition across most markets, versus Q19, which takes into account local market nuances. The global classification uses a U.S. centric definition for determining independence (with exceptions noted below), but provides more global comparability across markets.

Most nominating committees are responsible for developing a policy on the size and composition of the board and for identifying and approving nominees for vacant positions on the board of directors. The
committee should have the benefit of the CEO’s involvement in the selection process, but the responsibility for selection of board nominees should be that of independent directors.

Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. Nomination committees with less than independent membership as recommended by local best practice will raise increasing levels of concern.

ISS Governance QualityScore will consider: the percentage of independent members (i.e., as defined by ISS’ proxy voting guidelines); if no information is given, if no committee exists, or if there is no clear nomination process, then the answer would be deemed as “not disclosed”.

Market Applicability: All markets except Japan

What percentage of the compensation committee is independent under ISS’ global classification? (Q381)

This factor evaluates compensation committee independence based on a uniform ISS definition across most markets, versus Q25, which takes into account local market nuances. The global classification uses a U.S. centric definition for determining independence (with exceptions noted below), but provides more global comparability across markets.

The compensation committee makes recommendations and sets guidelines for the compensation of executives of the company. Best practice dictates that the panel should be composed solely of independent directors.

ISS Governance QualityScore will consider: the percentage of independent members (as defined by ISS’ proxy voting guidelines) if no information is given as to independence or if no committee exists, then the answer would be deemed “not disclosed”.

Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings. Compensation committees with less independent membership as recommended by best practice raises concern of governance risk.

Market Applicability: U.S., Canada, Anglo, W. Europe (Portugal*), Germanic, S. Europe, Nordic, Australasia, AsiaPac, S. Korea, Latin America, Africa, India

What percentage of the audit committee is independent based on an ISS global classification? (Q382)

This factor evaluates audit committee independence based on a uniform ISS definition across most markets, versus Q31, which takes into account local market nuances. The global classification uses a U.S. centric definition for determining independence (with exceptions noted below), but provides more global comparability across markets.

Like other key board committees, audit panels/committees should include only independent non-executives to reduce the risk of conflict of interest with regard to the company’s accounts.
ISS Governance QualityScore

ISS Governance QualityScore will consider: the percentage of independent members as defined by ISS' policy guidelines; if no information is given as to independence or if no committee exists, then the answer would be deemed “not disclosed”.

Please see Appendix I concerning scoring this question when new directors are appointed to the board between shareholder meetings.

Audit committees with less independent membership as recommended by local best practice raises the concern of governance risk.

Market Applicability: US, Canada, Anglo, W. Europe, Germanic, S. Europe, Nordic, Australasia, AsiaPac, FQ39S.
Korea, Latin America, Africa, and India

Board Practices

How many directors serve on an excessive number of outside boards? (Q309)

This question will consider the number of outside board positions that are held by each individual director. Directors with an excessive number of board seats may not have sufficient time to devote to the needs of individual boards. Answers will consider the number of board members who serve on an excessive number of board positions of publicly traded companies (differentiating between directors who are active CEOs and those that are not active CEOs). Excessiveness of outside board positions is based on market-specific ISS policy, available on the ISS Policy Gateway.

Market Applicability: India, Korea, AsiaPac

Do executives serve on an excessive number of outside boards? (Q36)

An executive role is a position of great responsibility and time demands. Sitting on multiple outside boards may threaten the ability of the executives to attend to the business of his or her primary employer.

This factor has a zero-weight impact on the scoring model for Latin American companies and is included for informational purposes only.

Market Applicability: W. Europe, Germanic, Nordic, S. Europe. Latin America, Anglo

Does the CEO serve on a significant number of outside boards? / How many boards does the CEO sit on (US and Canada only)? (Q37)
The chief executive role is a position of great responsibility and time demands. Sitting on multiple outside boards may threaten the ability of the CEO to attend to the business of his or her primary employer.

ISS Governance QualityScore will consider the total number of public board seats held by the CEO (including the company), or whether no information is available. All subsidiaries with their own publicly-traded stock are counted as individual boards.

Excessive board memberships - more than two outside boards (three total boards) – raises governance risk concern.

This factor has a zero-weight impact on the scoring model for Latin American companies and is included for informational purposes only.

Market Applicability: U.S., W. Europe, Germanic, Nordic, S. Europe, Australasia, Canada, Latin America, Anglo

How many (non-executive) directors serve on a significant number of outside boards? (Q38)

Directors with an excessive number of board seats may not have sufficient time to devote to the needs of individual boards.

ISS Governance QualityScore will consider the total number of board seats (including the company) held by non-executives to determine if they are excessive, as defined by the respective market, or whether no information is available. ISS’ benchmark policy defines excessive in the U.S. as more than five public company board seats. For U.S. and Canadian companies, all directors are included except the CEO.

This factor has a zero-weight impact on the scoring model for Latin American companies and is included for informational purposes only.

Market Applicability: U.S., W. Europe, Germanic, Nordic, S. Europe, Australasia, Canada, Latin America, Anglo

Does the Board Chair serve on a significant number of outside boards? (Q39)

As for other non-executives, but even more so for the chair of the board, holding multiple outside board positions may represent an impediment to the director’s ability to devote sufficient time to the needs of each company.

This factor has a zero-weight impact on the scoring model for Latin American companies and is included for informational purposes only.

Market Applicability: W. Europe, Germanic, Nordic, S. Europe, Australasia, Latin America, Anglo

Has the company disclosed the attendance of each director? (Q337)

In China, attendance record of only independent directors is required to be disclosed; however, the best practice is to disclose attendance record of all directors on the board.
ISS Governance QualityScore will consider whether or not the company has disclosed information on individual attendance of board and committee meetings.

**Market Applicability:** AsiaPac, India

- **What percentage of all meetings was attended by at least 50 percent of the supervisory board?** *(Q43)*

- Directors who do not attend a sufficient number of board meetings are not fulfilling their obligation to represent shareholders and provide oversight and direction to management. This question was designed to account for the specific disclosure in the Germanic markets.

**Market Applicability:** Germanic

- **What percentage of the directors attended less than 75 percent of the board and/or key committee meetings?** *(Q44)*

- Directors who do not attend a sufficient number of board meetings are not fulfilling their obligation to represent shareholders and provide oversight and direction to management.
- In Australia, ISS looks at director attendance at board and committee meetings for two consecutive years.
- In South Korea and Japan, this question will only examine the attendance of outside directors, as attendance records of inside directors are not required to be disclosed in these markets.

**Market Applicability:** All regions

- **Did any director attend less than 75 percent of the aggregate board and applicable key committee meetings without a valid excuse?** *(Q45)*

- Directors who do not attend a sufficient number of board and key committee meetings are not fulfilling their obligation to represent shareholders and provide oversight and direction to management.
- ISS Governance QualityScore will consider the number of directors who attended less than 75 percent of the aggregate of their board and committee meetings, with consideration given to whether the meetings were missed for a valid excuse (e.g. medical issue, family emergencies, or missing only 1 meeting.). In Canada, key committees include the Audit, Compensation and Nominating committees. For U.S. companies, this question applies to all board and committee meetings per SEC disclosure requirements.

**Market Applicability:** U.S., Canada, Anglo
Does the company routinely hold independent director meetings or have other mechanisms to facilitate effective collaboration of independent directors, management, and statutory auditors in compliance with the Japanese Corporate Governance Code 4-8-1? (Q366)

› Routine sessions independent directors where no management is present is considered an effective means to foster understanding and share information among independent directors, and help enhance their oversight ability.
› The Japanese Corporate Governance Code (4-8-1) stipulates that in order to actively contribute to the board, “independent directors should endeavor to exchange information and develop a shared awareness among themselves from an independent and objective standpoint” and that routinely held meetings consisting solely of independent directors could help achieve this objective.

Market applicability: Japan

What percentage of directors received shareholder approval rates below 80%? (Q312)

› ISS Governance QualityScore will consider the percentage of directors who received less than 80 percent of votes cast at the most recent shareholder meeting.
› Opposition to a board member typically signifies a perceived lack of accountability, responsiveness, independence, and/or competence on the part of the targeted director, warranting further evaluation. ISS Governance QualityScore will consider directors who received less than 80 percent shareholder approval. ISS collects meeting results as they are available and this factor will be updated and recalculated accordingly.
› This question is seeking to highlight director elections with “outlier” results. In 2016, among Russell 3000 companies, fewer than 4% of all director elections resulted in less than 80% shareholder support.
› From the date of publication of the ISS proxy research report until the meeting results are available, this question will be pending and the result will indicate “meeting results in progress” for this factor.

Market applicability: U.S.

Does the company disclose the existence of a formal CEO and key executive officers’ succession plan? (Q348)

› Succession events define periods that have the potential to cause significant disruption and distraction for companies and for their boards, and sometimes can lead to detrimental impacts on shareholders and the value of their holdings. Well-crafted and well-understood succession plans can help minimize disruption in these scenarios; transition events at companies such as Apple demonstrate how properly-planned succession can ease shareholder concerns and protect shareholder value.
Estimates of the financial impact of planned CEO succession vary. Acknowledging the difference between having a succession plan and planned succession, there are some data points that accentuate the magnitude of the problem. According to a recent study by Strategy&, “Large companies that underwent forced successions in recent years would have generated, on average, an estimated $112 billion more in market value in the year before and the year after their turnover if their CEO succession had been the result of planning.”

ISS Governance QualityScore will consider whether a company has a board-approved, periodically-evaluated succession plan for the CEO, other senior management, and key executive officers.

Market Applicability: U.S.

Does the company have a mechanism to monitor and supervise its CEO succession planning appropriately in compliance with the Japanese Corporate Governance Code 4-1-3? (Q368)

When properly planned and thoughtfully executed, CEO succession offers a company far more than just the transitioning of its top leader. It enables organizations to envision new opportunities for growth, and realign and strengthen processes and systems throughout the enterprise. Succession planning is a human capital risk because of its potential high impact on business performance and continuity. Making long-term and emergency succession plans for the CEO is a fundamental board responsibility, one that should be addressed on a regular basis regardless of CEO’s health and tenure.

While the Japanese Corporate Governance Code (4-1-3) does not require the establishment of a CEO succession policy and companies need not disclose whether it has a formal CEO succession plan or not, the Code recommends companies to institute a mechanism for monitoring and facilitating CEO succession plan.

Market applicability: Japan

What was the average outside directors’ total compensation as a multiple of the peer median? (Q315)

This relative measure expresses the prior year’s average outside director's pay (based on total compensation reported for each non-executive director in the company’s proxy statement) as a multiple of the median pay of its ISS-determined comparison group for the same period. The calculation for this measure is: the average outside director’s total pay divided by the median average outside director total pay level within the comparator group.

Market applicability: U.S.

What is the aggregate level of stock ownership of the officers and directors as a percentage of shares outstanding? (Q140)
Best practice dictates that directors maintain a meaningful level of share ownership by a certain time after appointment to better align their interests with those of shareholders.

ISS Governance QualityScore will consider the total level of holdings of directors and executives as a percentage of shares issued by the company.

This factor has moved from the Compensation Category in the Equity Risk Mitigation subcategory to the Board Category in the Board Practices subcategory.

This factor has a zero-weight impact on the scoring model for Latin American companies and is included for informational purposes only.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia, Latin America, Africa, Russia

What proportion of directors with more than one year of service own stock, who can legally or practically do so? (Q144)

Similar to the stock ownership rationale above, all directors should maintain an equity stake in the company.

ISS Governance QualityScore will consider the number of directors with more than one year of service that own stock divided by the number or applicable directors, or exclude directors if the information is not disclosed (based on beneficial ownership, as reported). In cases where details regarding ownership are vague or otherwise not definitive with regard to the mandatory nature of the ownership requirement or level of holdings, ISS will deem the information “not disclosed.”

For U.S. markets, this question will consider the directors who can practically own shares. Certain directors, such as employees or representatives of significant shareholders or investment firms, may be prohibited by internal policies from personally holding shares (for example, to avoid the appearance or possibility of “front-running”). Such directors are excluded from this calculation.

In the U.S. and Canada, deferred share units are also considered for this question.

Market Applicability: U.S., Canada, AsiaPac, Australasia, S. Korea, India

Did any executive or director pledge company shares? (Q243)

The prospect that an executive or director may be forced to sell a substantial amount of shares poses significant risks for other shareholders, who may see the value of their shares decline. In addition, a highly leveraged executive may be incentivized to riskier behavior.

ISS Governance QualityScore will consider whether company executives or directors have pledged company shares. ISS will consider pledging of shares of an institution or company where a director or an executive has a beneficial ownership.

This question covers all pledging, even if not considered problematic. Significant pledging that rises to a level of concern will also be captured under Question 345 as a failure of governance.
Market Applicability: U.S.

Board Policies

► Does the company disclose a policy requiring an annual performance evaluation of the board? (Q41)

› Evaluating board performance is a way of measuring effective contribution and commitment of board members to their role, assessing the way the board operates, whether important issues are properly prepared as well as key competences on the board.

› The board, committees and each individual director should be regularly assessed regarding his, her, or its effectiveness and contribution. An assessment should consider (a) in the case of the board or a board committee, its mandate or charter, and (b) in the case of an individual director, the applicable position description(s), as well as the competencies and skills each individual director is expected to bring to the board. Evaluating board performance is a way of measuring effective contribution and commitment of board members to their role, assessing the way the board operates, whether important issues are properly prepared, and key competences on the board.

› This question will evaluate whether the company organizes board evaluations, as well as the nature of such evaluation (frequency, individual, outside assessment).

› In the U.S., a robust policy is when the company discloses an (1) annual board performance evaluation policy that includes (2) individual director assessments and (3) an external evaluator at least every three years. Performance evaluation policies disclosed or detailed in the corporate governance guidelines, nominating/governance committee charters, or the proxy statement are evaluated for this factor.

› In Japan, companies are recommended to conduct an annual performance evaluation of the board in accordance with the Code 4-11-3 of the Japan Corporate Governance Code. This question in Japan will examine whether a company complies with the Code 4-11-3.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia, Russia, Japan

► Does the company disclose board or governance guidelines? (Q46)

› New York Stock Exchange listed companies are required to publicly disclose board/corporate governance guidelines. Other exchanges, however, do not yet mandate such disclosure.

› ISS Governance QualityScore will consider whether the company publicly discloses board/governance guidelines. When considering answers to this question, ISS Governance QualityScore will look for guidelines disclosed as a single document as opposed to multiple separate documents covering various elements of governance.
Market Applicability: U.S.

What is the quorum for director meetings? (Q215)

A quorum ensures that directors meetings can only convene with a minimum number of directors present eliminating any director resolutions that may be passed in a meeting where less than half of directors are present.

Market Applicability: Canada

Does the company allow the Board Chair a second or casting vote at director meetings in the event of a tie? (Q100)

A casting or second vote is contrary to the tenet of one-person, one-vote.

The ability of the chair to have a second or casting vote on tie votes at board meetings is a questionable practice. Granting the chair a second vote on contentious issues that result in a deadlocked board can lead to conflicts of interest and potential inequality among directors.

Market Applicability: Canada, S. Europe

Are directors subject to stock ownership guidelines? (Q143)

Best practice dictates that directors maintain a meaningful level of share ownership by a certain time after appointment to better align their interests with those of shareholders. This question is answered as a multiple of the cash portion of the annual retainer received by a non-employee director.

For the Canadian Market, ISS classifies ownership guidelines as follows:

(i) Robust: six-times the annual cash retainer or more;
(ii) Standard: three- to five-times retainer; and,
(iii) Sub-Standard: less than three-times retainer.

For the U.S. Market, the ISS classification is:

(i) Robust: five-times the cash portion of the directors' base retainer or more;
(ii) Standard: three or four times the cash portion of the directors' base retainer; and,
(iii) Sub-Standard: two times or below the cash portion of the directors' base retainer.

The rigor of the stock ownership guidelines is a factor. In cases where the details regarding ownership are vague or otherwise not definitive (e.g., ownership is "encouraged" or "stressed") with regard to the mandatory nature of the ownership requirement or level of holdings, ISS will deem the information “not disclosed.” For companies incorporated in Australia and New Zealand, the normal disclosure of director ownership guidelines is equivalent to their annual retainer. An additional response for Australia is foreseen to indicate and take into account significant holdings by directors.
Market Applicability: U.S., Canada, Australasia

▸ Does the company have a policy prohibiting hedging of company shares by employees? (Q244)

› Best practice is to incorporate a robust policy that prohibits all types of hedging transactions within companies’ insider trading policies or separate anti-hedging policies. Hedging against losses in company shares breaks the alignment between shareholder and executives that equity grants are intended to build.

› ISS Governance QualityScore will consider whether the company has instituted a policy that prohibits hedging of company shares. To be considered “robust,” the policy should prohibit a full range of transactions, including short-selling, options, puts, and calls, as well as derivatives such as swaps, forwards, futures; alternatively, a robust policy would stipulate that no “hedging” of company stock is permitted. Additionally, hedging policies that do not cover a broad group of participants and those that have a pre-clearance or pre-approval requirement will be considered as “not robust”.

Market Applicability: U.S., Canada, Australasia

Related Party Transactions

▸ Does the company disclose information on related-party transactions (RPTs)? (Q336)

› Related-party transactions can lead to conflicts of interest that may compromise independence, particularly in instances where participation or ties to transactions are not fully disclosed.

› ISS Governance QualityScore will consider the level of disclosure on conflicts of interest.

Market Applicability: Russia, India

▸ What percent of the directors were involved in material related-party transactions (RPTs)? (Q50)

› Related-party transactions (RPTs) can lead to conflicts of interest that may compromise independence, particularly in instances where participation or ties to transactions are not fully disclosed.

› ISS Governance QualityScore will consider the percentage of directors who are directly or indirectly (through employers and immediate family members) involved in material related-party transactions, or if no information with which to make a determination is given. In the U.S., a material transactional relationship is defined as one that: includes grants to non-profit organizations; exists if the company makes annual payments to, or receives annual payments from, another entity exceeding the greater of $200,000 or 5 percent of the recipient’s gross revenues, in the case of a company which follows NASDAQ listing standards; or the greater of $1,000,000 or 2 percent of the recipient’s gross revenues, in the case of a company which follows NYSE/Amex listing standards. In the case of a company which follows neither of the preceding

The Global Leader in Corporate Governance & Responsible Investment
© 2019 ISS | Institutional Shareholder Services 33 of 174
standards, ISS will apply the NASDAQ-based materiality test. (The recipient is the party receiving the financial proceeds from the transaction.)

› A material professional service relationship is defined as one that: include, but are not limited to the following: investment banking/financial advisory services; commercial banking (beyond deposit services); investment services; insurance services; accounting/audit services; consulting services; marketing services; legal services; property management services; realtor services; lobbying services; executive search services; and IT consulting services; exists if the company or an affiliate of the company makes annual payments to, or receives annual payments from, another entity in excess of $10,000 per year.

› Note that RPTs of a director appointed between shareholder meetings may not be determinable under ISS standards. In such cases, scoring related to director RPTs will not be affected by such appointments (i.e., the company’s QS will continue to reflect the RPT status as of the last annual meeting, until the next annual meeting when final determinations are made). Specifically for Canadian companies, any disclosure under the RPT section will be considered for this question.

Market Applicability: U.S., Canada

▶ Do the directors with related-party transactions sit on key board committees? (Q51)

› The independence of the nomination, audit, and compensation committees is vital to their effective oversight of these key board functions. The existence of transactional relationships with the company has the potential to undermine this independence.

› ISS Governance QualityScore will consider whether directors with material related-party transactions (RPTs) sit on key committees, if it is not applicable, or if information with which to make a determination is not given. See above for a definition of material RPTs. Key committees are defined as nomination, audit, and compensation.

Market Applicability: U.S., Canada

▶ Are there material related-party transactions (RPTs) involving the CEO? (Q216)

› The CEO’s special role in the company demands particular attention to avoid even the appearance of self-dealing.

› ISS Governance QualityScore will consider whether the CEO has engaged in material related-party transactions with the company.

Market Applicability: U.S., AsiaPac
Board Controversies

How many directors received withhold/against votes of 50% or greater at the last annual meeting? (Q49)

Significant opposition to a board member typically signifies a lack of accountability, responsiveness, independence, and/or competence on the part of the targeted director, warranting further evaluation.

ISS Governance QualityScore will consider the number of directors with majority opposition of votes cast\(^3\) at the last annual meeting. From the date of publication of the ISS proxy research report until the meeting results are available, this question will be pending and the result will indicate “meeting results in progress” for this factor.

Market Applicability: U.S., Canada

Has the board adequately addressed a shareholder resolution supported by a majority vote? (Q99)

Directors should be responsive to the company’s owners, particularly in regard to shareholder proposals that receive a majority of the votes cast.

ISS Governance QualityScore will consider whether majority support for shareholder proposals was evidenced, and, if so, whether the board has adequately addressed it.

Factors that will be considered are:

- Disclosed outreach efforts by the board to shareholders in the wake of the vote;
- Rationale provided in the proxy statement for the level of implementation;
- The subject matter of the proposal;
- The level of support for and opposition to the resolution in past meetings;
- Actions taken by the board in response to the majority vote and its engagement with shareholders;
- The continuation of the underlying issue as a voting item on the ballot (as either shareholder or management proposals); and
- Other factors as appropriate.

In general, ISS' determination of sufficient board response will be based on disclosure in the proxy for the annual meeting after the majority vote was received.

Market Applicability: U.S.

\(^3\) For votes cast, ISS uses For/(For + Against). Abstentions are not included.
Has the board adequately responded to low vote support for a management proposal? (Q350)

- Certain management-sponsored ballot items may not be binding on the company, nevertheless it is still important that companies listen to their shareholders on these votes and respond accordingly. These items include director elections, the advisory vote on executive compensation, and the frequency of say on pay.
- Low support for director elections is considered less than 50% of the votes cast. ISS will examine whether the company adequately responded to the underlying issues causing the low support for the nominees.
- For the advisory vote on executive compensation (say-on-pay), less than 70% of the votes cast is considered low support. The company’s disclosure of its shareholder outreach to determine the reasons for the low support, and the actions taken to address the issues, are key in this determination.
- Adoption of a say on pay frequency that received lower support than the frequency preferred by a majority or plurality of shareholders is examined taking into account the rationale provided by the company for its adoption, ownership structure, and any history of compensation concerns at the company.

Market Applicability: U.S.

Has ISS determined that the board had problematic governance practices that reduced shareholder rights? (Q345)

- Investors indicate little tolerance for unilateral boardroom adoption of bylaw amendments that diminish shareholder rights. Factors taking into consideration in the ISS review include the rationale, disclosure, level of impairment, track record, and other governance concerns.
- Unilateral bylaw/charter amendments that are considered material include, but are not limited to: diminishing shareholder rights to call a special meeting/act by written consent, classifying the board, increasing authorized capital, and lowering quorum requirements, without shareholder approval.
- Adverse charter and bylaw provisions and class structure adopted by newly public companies are also subject to this scrutiny.
- Governance failures that are considered material include, but are not limited to: material failures of governance, stewardship, risk oversight or fiduciary responsibilities at the company; failure to replace management as appropriate; or egregious actions related to a director’s service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.
- The most common categories of governance failures are excessive pledging of shares and failure to opt-out of state laws requiring a classified board (Indiana and Iowa.)

Market Applicability: U.S., Hong Kong, Singapore, and China

What was the lowest percentage of vote support received by management-nominated directors at their most recent annual meeting? (Q383)
ISS Governance QualityScore
Overview and Updates

This factor helps investors find companies where investors might have governance concerns, as evidenced by lower support for one of the management-nominated directors at their most recent annual general meeting (AGM). For Classified boards, the factor will report the lowest support for any sitting management-nominated director at their most recent election regardless if the election was at the company’s most recent annual general meeting.

This factor is similar to Q312 and Q49 but allows investors to compare the minimum support levels across companies.

For non-US companies, this factor will also consider if the board utilizes a US-style board structure.

Opposition to a board member typically signifies a perceived lack of accountability, responsiveness, independence, and/or competence on the part of the targeted director, warranting further evaluation.

ISS collects meeting results for publicly traded securities as they are available; Unlisted and non-public securities are excluded from the calculation. This factor will be updated and recalculated accordingly as vote results are collected.

From the date of publication of the ISS proxy research report until the meeting results are available, this question will be pending and the result will indicate “meeting results in progress” for this factor.

Market Applicability: US, Canada, W. Europe, Germanic, S. Europe, Nordic, Anglo, Australasia, AsiaPac, Latin America, Africa, South Korea*, India

What was the percentage of vote support for the CEO at the latest meeting? (Q391)

This factor evaluates the vote support for the CEO on the board of directors from the company’s most recent meeting where the shareholders elected the CEO to the board of directors.

This is represented as a percentage of votes “for” over the sum of “for” and “against.”

If the CEO does not serve on the board, if the CEO was appointed after the most recent meeting, or if the CEO was elected in a slate ballot, the company will not be penalized.

If there are multiple executives classified as CEO (e.g. co-CEOs), ISS will evaluate this factor for the CEO with the lowest level of support.

Market Applicability: US, Canada, W. Europe, Germanic, S. Europe, Nordic, Anglo, Australasia, AsiaPac, Latin America, Africa, South Korea*, India

What was the percentage of vote support for the Board Chair at the latest meeting? (Q392)

This factor evaluates the vote support for the Chair of the board of directors from the company’s latest meeting where a Director Election for the Chair took place.

This is represented as a percentage of votes “for” over the sum of “for” and “against.”

ISS Governance QualityScore will consider the vote support, whether no Chair is publicly identified, if there is sufficient vote information, or whether no Chair is appointed.
If there are multiple directors classified as Board Chair (e.g. co-Chairs), ISS will evaluate this factor for the Board Chair with the lowest level of support.

Market Applicability: US, Canada, W. Europe, Germanic, S. Europe, Nordic, Anglo, Australasia, AsiaPac, Latin America, Africa, South Korea*, India

Diversity

What proportion of non-executive directors on the board has lengthy tenure? (Q13)

- Limiting director tenure allows new directors to the board to bring fresh perspectives. An excessive tenure is considered to potentially compromise a director’s independence and as such ISS Governance QualityScore will consider the non-executive directors where tenure is higher than the recommended local best practice. ISS recognizes that there are divergent views on this subject. While a new director may be more likely to back down from a powerful chief executive, a director who has been with the company for a long time could easily have loyalties to the company over its management. However, directors who have sat on the board in conjunction with the same management team may reasonably be expected to support that management team’s decisions more willingly. In general, ISS believes that a balanced board that is diverse in relevant viewpoints and experience is ideal.
- Investors recognize that having a small number of long-serving directors may support strong board performance. ISS Governance QualityScore will not deduct credit from this question unless more than one-third of directors exceed the lengthy tenure definition.
- ISS’ definition of lengthy tenure is defined by a combination of local market practices and investor preferences, and is not the same in all regions.
- For the US, Canada, Hong Kong, and, Singapore, lengthy tenure is defined as nine or more years. For China, the definition is six or more years. For India, the definition is 10 or more years. For Australia and for New Zealand, it is 12 or more years. For Russia it is 7 or more years.
- This question will consider all directors except executives. Affiliated Directors and Outside Directors, as classified by ISS, are included.

Market Applicability: AsiaPac, U.S., Canada, Russia, India, Australasia

How many women are on the board? (Q304)

- This question will evaluate the number of women on the board. According to some academic and other studies, increasing the number of women on boards of directors correlates with better long-term financial
performance. Such findings could have a significant effect on the nomination of women as corporate officers and directors.

› According to ISS’ 2014 policy survey, a majority of all respondents indicate that they consider overall diversity (including but not limited to gender) on the board when evaluating boards.\(^4\)

› Full credit on this factor will be earned when three or more women are on the board. As of November 2017, the average number of board members across all ISS Governance QualityScore coverage companies stands at nine, which would equate to the typical company receiving full credit with one-third of the board comprised of women.

› This factor is scored in all regions.

Market applicability: US, Canada, W. Europe, Germanic, S. Europe, Nordic, Anglo, Australasia, AsiaPac, Japan*, Latin America, Africa, South Korea, India, Russia

---

Does the board have any mechanisms to encourage director refreshment? (Q349)

› Board refreshment has come into investor focus, and many companies have recognized the need to implement mechanisms to encourage board refreshment. While the gold standard is for a rigorous annual evaluation of all directors to ensure a continued match of their skill sets against the needs of the company, ISS is displaying, for information purposes, other structural mechanisms the board may have in place to encourage refreshment.

› The most popular style of mechanism is a mandatory retirement age. Among S&P 500 companies, more than 70% currently set a mandatory retirement age. However, as the average age of boards has slowly increased, so has the trend in setting the age for mandatory retirement.

› Term limits have also been implemented by some boards, but to a much smaller extent than mandatory retirement ages. However, there may be increasing interest in term limits, particularly as some boards reach out to younger director candidates to fill critical boardroom skill and capability gaps. There have been a few recent high-profile adoptions, including at General Electric.

› As other board refreshment mechanisms gain prominence, they may also be included in this factor.

› While we note that some investors have questioned selective enforcement of refreshment mechanisms at some companies (through the issuance of waivers or the liberalization of mechanisms), in this iteration this factor focuses narrowly on the presence of refreshment-promoting mechanisms.

› This factor has a zero-weight impact on the scoring model for U.S. companies and is included for informational purposes only.

Market Applicability: U.S.

What is the proportion of women on the board? (Q354)

- This question will evaluate the proportion of women on the board. According to some academic and other studies, increasing the number of women on boards of directors correlates with better long-term financial performance. Such findings could have a significant effect on the nomination of women as corporate officers and directors.
- According to ISS’ 2014 policy survey, a majority of all respondents indicate that they consider overall diversity (including but not limited to gender) on the board when evaluating boards.
- Maximum credit on this factor will be earned when at least 50 percent of board seats are held by women.
- This factor is scored in all regions.

Market applicability: US, Canada, W. Europe, Germanic, S. Europe, Nordic, Anglo, Australasia, AsiaPac, Japan*, Latin America, Africa, South Korea, India, Russia

What proportion of non-executive directors has been on the board less than 6 years? (Q355)

- The skills, capabilities, and perspectives needed in the boardroom continually evolve. For instance, over the past several years, many boards have recognized the need for increased technology fluency among their ranks, specifically focusing on the board’s ability to oversee cybersecurity risk management and assess its effectiveness. But the gaps aren’t limited to cybersecurity; other boards have recognized the need to enhance shareholder engagement skills, financial risk management skills, and more. The skills and capabilities required to perform key board responsibilities will likely continue to evolve over time.
- In addition, many perceive a risk of “groupthink” in the boardroom, particularly among large blocs of directors who have served together for long periods, which may threaten to impair board effectiveness and even may mask individual director skills and capabilities.
- This factor, in concert with related board composition factors, is designed to balance board refreshment, board stability, and the importance of some long-tenured directors to a company’s success. The factor does not encourage (by awarding additional credit) excessive levels of refreshment.
- The factor awards increasing credit for increasing proportions of the board represented by directors with less than six years of tenure as of the most recent annual meeting, with no additional credit granted for proportions in excess of one-third.
- This question will consider all directors except executives. Affiliated Directors and Outside Directors, as classified by ISS, are included.

Market Applicability: U.S., Australasia

How many women serve in leadership roles on the board? (Q386)
This factor evaluates the number of women on the board serving in leadership positions including board chair, chair of the Audit, Remuneration, and Nominating Committees; Senior Independent Director, non-employee chair, or Lead Director. According to some academic and other studies, increasing the number of women on boards of directors correlates with better long-term performance. Such findings could have a significant effect on the nomination of women as corporate officers and directors.

According to ISS’ 2014 policy survey, a majority of all respondents indicate that they consider overall diversity (including but not limited to gender) on the board when evaluating boards.

In the Anglo region, a Higgsian Chair also counts as a leadership position.

Market Applicability: All markets except Japan

How many women are named executive officers at the company? (Q387)

This factor evaluates the number of named executive officers who are women. Named executive officers (NEOs) are defined as the corporate executives whose compensation (remuneration) is disclosed in the company’s annual proxy, management information circular, or annual report, per each market’s regulatory guidelines.

According to some studies, increasing the number of women in executive roles correlates with better long-term financial performance. Such findings could have a significant effect on the nomination of women as executive officers.

Companies with no women as named executive officers will lose credit. Credit will be capped for companies having more than 2 women as named executive officers.

Market Applicability: US, Canada, Anglo*, and Australia*

What is the standard deviation of director age? (Q388)

This factor evaluates the range of director ages present on a board as expressed through the sample standard deviation of ages. ISS will evaluate age primarily based on the birth year collected for each director.

A well-rounded board has the benefit of a diversity of viewpoints, concerns, and questions influenced by board members’ age.

Companies lower than the 25th percentile of the Governance QualityScore universe will not receive credit, companies between the 25th and 75th percentiles will receive increasing levels of credit, and companies at or above the 75th percentile will receive the maximum credit.

Market Applicability: All markets except Japan

What is the standard deviation of director tenure (in years)? (Q389)
This factor evaluates the range of director tenures present on a board as expressed through the sample standard deviation of tenures on the board. ISS will evaluate tenure by considering the number of years the director has been a board member, and if less than one year, ISS will consider the number of months.

A well-rounded board has the benefit of a diversity of viewpoints, concerns, and questions influenced by board members’ tenure.

This is a zero-weighted factor for the first year of its introduction and is for informational purposes. If scored in future years, allowances will be made for a lack of tenure at new or recently public companies.

Market Applicability: All markets except Japan*

Compensation/Remuneration Category

Pay for Performance

▶ Is there a cap on the CEO’s annual bonus? (Q114)

▶ Best practices suggest companies disclose bonus caps for CEOs that are tied to a fixed and/or disclosed value such as base salary.
▶ ISS Governance QualityScore will consider the type of cap – if any – is applied to the annual bonus granted to the CEO.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia

▶ Is there a cap on executives’, excluding the CEO, annual bonus? (Q115)

▶ Best practices suggest companies disclose bonus caps for executives that are tied to a fixed and/or disclosed value such as base salary.
▶ ISS Governance QualityScore will consider the type of cap – if any – is applied to the annual bonus granted to executives other than the CEO.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia

▶ What percentage of the annual bonus for the CEO is or can be deferred? (Q116)

▶ Deferred compensation is used by companies to reduce long-term risk and better align executive compensation with company performance over the long term. Holdbacks or deferrals on compensation are recommended best practice in many markets, particularly in the wake of the financial crisis and the sharpened focus on tying pay to long-term company performance.
ISS Governance QualityScore will consider whether a portion of the annual bonus granted to the CEO is or can be deferred.

For Australasia and Anglo it will be taken into account whether or not the CEO is a significant shareholder (representative) or whether or not shareholder guidelines have been met.

Market Applicability: Canada, W. Europe, Germanic, Anglo, S. Europe, Australasia

What percentage of the annual bonus for executives, excluding the CEO, is or can be deferred? (Q117)

Deferred compensation is used by companies to reduce long-term risk and better align executive compensation with company performance over the long term. Holdbacks or deferrals on compensation are recommended best practice in many markets, particularly in the wake of the financial crisis and the sharpened focus on tying pay to long-term company performance.

ISS Governance QualityScore will consider whether a portion of the annual bonus granted to executives, other than the CEO, is or can be deferred.

For Australasia and Anglo it will be taken into account whether or not other executives are significant shareholder(s) (representatives) or whether or not shareholder guidelines have been met.

Market Applicability: W. Europe, Germanic, Anglo, S. Europe, Australasia

What is the size of the CEO’s 1-year pay as a multiple of the median pay for the company's peers (MOM)? (Q228)

This relative measure expresses the prior year’s CEO pay as a multiple of the median pay of its ISS-determined comparison group for the same period. Calculating this measure is straightforward: the company’s one-year CEO pay is divided by the median pay for the comparison group. This measure ranges generally from 0 (CEO has no pay) to 25 times median. The median company paid its CEO close to one times the median of its peer group.

Companies in regions where this factor is applied, but the local jurisdiction does not require say-on-pay/remuneration proposals and/or ISS has not performed a quantitative say-on-pay analysis, will not be penalized.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, S. Europe, Nordic, Australasia

What is the degree of alignment between the company’s TSR and change in CEO pay over the past five years (PTA)? (Q229)

This absolute measure compares the trends of the CEO’s annual pay and the value of an investment in the company over the prior five-year period. The measure is calculated as the difference between the slopes of
weighted linear regressions for pay and for shareholder returns over a five-year period. This difference indicates the degree to which CEO pay has changed more or less rapidly than shareholder returns over that period.

- This measure ranges from approximately -100% to approximately +100%, negative scores indicating misalignment.
- Companies in regions where this factor is applied, but the local jurisdiction does not require say-on-pay/remuneration proposals and/or ISS has not performed a quantitative say-on-pay analysis, will not be penalized.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, S. Europe, Nordic, Australasia

» What is the ratio of the CEO’s total compensation to the next highest-paid active executive? (Q232)

- Internal pay parity ratios among executives may be an indicator of potential succession-planning challenges within the organization, and may also signal that pay levels for the CEO are excessive.
- ISS Governance QualityScore will measure the CEO’s total compensation as a ratio of the next highest-paid active executive's pay.

Market Applicability: U.S.

» What is the performance period for the latest active long-term incentive plan or the proposed plan for executives? (Q233)

- Incentive plans whereby long-term incentives are granted based on performance should have a performance period of at least 24 to 36 months in order to comply with the long-term nature of such a plan.

Market Applicability: W. Europe, Anglo, S. Europe, Australasia, Africa

» What is the degree of alignment between the company’s annualized 3-year pay percentile rank, relative to peers, and its 3-year annualized TSR rank, relative to peers (RDA)? (Q329)

- ISS annually conducts a pay-for-performance analysis to identify strong or satisfactory alignment between pay and performance over a sustained period.
- Companies in regions where this factor is applied, but the local jurisdiction does not require say-on-pay/remuneration proposals and/or ISS has not performed a quantitative say-on-pay analysis, will not be penalized.

Market applicability: U.S. and Canada, W. Europe, Germanic, Anglo, S. Europe, Nordic, Australasia
Non-Performance Based Pay

Have any NEOs been paid a guaranteed bonus in the most recent fiscal year or will be paid a guaranteed bonus in the future? (Q156)

- Multiyear bonus guarantees are considered problematic under ISS’ Problematic Pay Practices policy and sever the pay-for-performance linkage.
- This factor only considers cash-based bonuses.

Market Applicability: U.S., Canada

Does the company provide loans to executives? (Q154)

- In the applicable markets, ISS recommends that loans be made to employees only as part of a broad-based, company-wide plan to encourage ownership rather than being given only to executive directors. ISS also calls for loans with interest set at market rates to be paid back in full over a reasonable length of time.
- ISS Governance QualityScore will consider whether the company has made loans to any of its executives and whether these loans are made in the course of normal business activities. The loans provided to the company’s executive officers would aid them in purchasing shares of the company. This is usually given without, or at a very low interest rate.

Market Applicability: Canada, W. Europe, Germanic, Anglo, S. Europe, Australasia, Africa, Russia

Is part of the bonus granted or to be granted guaranteed? (Q118)

- Guaranteed bonuses to senior executives are a problematic pay practice because it could result in disconnect between pay and performance and undermines the incentivizing nature of such awards.

Market Applicability: Canada, W. Europe, Germanic, Anglo, S. Europe, Australasia, Africa

Did the company grant a one-off reward to any of its executives? (Q159)

- One-off rewards are discretionary grants for executives granted for a range of reasons such as transactions, new contracts, etc., often outside the scope of the remuneration policy, and not always tied to performance (except if they are conditional to performance conditions).
- ISS Governance QualityScore will consider whether one-off grants were rewarded, and, if so, whether performance conditions were attached, or if no information is given.

Market Applicability: Germanics, S. Europe, Australasia, Africa
What is the ratio of the CEO’s non-performance-based compensation (All Other Compensation) to Base Salary? (Q237)

- High levels of aggregate perks and other payments, such as payments-in-lieu of perks, are aggregated in the All Other Compensation amount. If these are greater than base salary it may reflect a significant additional compensation stream.
- ISS Governance QualityScore will consider the ratio of all other compensation – typically incorporating perks and other non-performance-based payments – to base salary, to determine whether significant additional compensation is being delivered through this conduit.

Market Applicability: U.S.

Use of Equity

Does the company have an equity-based compensation plan? (Q322)

- ISS Governance QualityScore will consider whether the company has established an equity-based compensation plan.
- In Japan, restricted shares and other equity-based compensations are generally categorized as performance-based compensation, which is covered under Q375. This question will apply only to stock option plans in Japan as disclosed in corporate governance reports.

Market applicability: AsiaPac, Latin America, Russia, South Korea, India, Japan*

Does the company have performance-based pay or other incentives for its executives? (Q375)

- Board of directors needs to create incentives that align the interests of executives with those of shareholders to make it in executives’ best interest to do what’s in the shareholders’ best interests.
- Performance-based pay, though gaining in popularity, is not common in Japan, and fixed salary and annual bonus make up most of executive pay. Presence of a performance-based pay or other incentive plans for executives could not only provide incentives for executives to enhance shareholder value but also could be seen as an indication of positive actions taken by the board.
- Information regarding presence of performance-based incentives is collected from corporate governance reports.

Market applicability: Japan

Do the company's active equity plans prohibit share recycling for options/SARS? (Q129)
Companies with liberal share counting provisions receive more utilization for their shares than those without the provision. Liberal use occurs when one or more of the following occur (i) tendered shares in payment of an option are recycled, (ii) shares withheld for taxes are added back in, (iii) actual stock-settled SARs/shares delivered are the only ones counted against the plan reserve.

ISS Governance QualityScore will consider whether recycling of stock options or stock appreciation rights is prohibited in the active equity plans, or if it is not applicable to the company. Sourcing of the relevant information will be from plan documents and will only consider employee plans (excluding plans for outside directors).

Market Applicability: U.S.

Do the company’s active equity plans prohibit option/ SAR repricing? (Q138)

This question addresses whether the compensation plan documents expressly prohibit option repricing without prior shareholder approval. Option repricing occurs when companies adjust outstanding stock options to lower the exercise price. Option exchange occurs when the company cancels underwater options and re-grants new options. Option replacements may be accomplished through option swaps, option re-grants or cash. In the US and Canadian markets, extending the term of outstanding options is also considered option repricing.

ISS Governance QualityScore will consider whether repricing of stock options or stock appreciation rights is prohibited in the company’s active equity plans, or if it is not applicable to the company. Sourcing of the relevant information will be from plan documents and only considers employee equity plans, not outside director only plans.

Market Applicability: U.S., Canada

Do the company’s active equity plans prohibit options or SARs cash buyouts? (Q238)

NASDAQ and New York Stock Exchange rules state that repricings are subject to shareholder approval unless the (shareholder approved) plan specifically states otherwise. However, the rules on both exchanges leave the door open for companies to exchange underwater stock options for a cash settlement, without seeking shareholder approval of the exchange.

ISS Governance QualityScore will consider whether cash buyouts of stock options or stock appreciation rights are prohibited in the company’s active equity plans or if it is not applicable to the company. Sourcing of the relevant information will be from plan documents and will only consider employee plans (excluding plans for outside directors).

Market Applicability: U.S., Canada
Do the company's active equity plans have an evergreen provision? (Q239)

- Best practice dictates that shareholders approve each replenishment of shares available for an equity compensation plan.
- ISS Governance QualityScore will consider whether the company's active equity plans have an evergreen provision, by which shares available for the plan are automatically replenished without a shareholder vote.

Market Applicability: U.S.

Do the company's active equity plans have liberal change-in-control vesting provisions? (Q240)

- While change-in-control agreements have their place in order to insulate executives from loss of employment in conjunction with a change in control, a liberal definition of change-in-control (e.g., a trigger linked to shareholder approval of a transaction, rather than its consummation, or an unapproved change in less than a substantial proportion of the board, or acquisition of a low percentage of outstanding common stock, such as 15 percent) may result in award vesting and payout even if an actual change in control does not occur. Such a definition may also discourage outside bids that could benefit shareholders.
- ISS Governance QualityScore will consider whether the company's active equity plans have a liberal change-in-control definition, under which executives may be entitled to receive accelerated vesting of equity grants without the occurrence of an actual change in control.

Market Applicability: U.S.

Has the company repriced options or exchanged them for shares, options, or cash without shareholder approval in the last three years? (Q139)

- Per ISS’ policy and compensation best practices espoused by investors, repricings should be put to shareholder vote.
- ISS Governance QualityScore will consider whether shareholder approval was obtained in the event of any repricing or exchanges in the last three years. Despite any provisions in the Plan allowing repricing, this factor addresses actual repricing activity without prior shareholder approval.

Market Applicability: U.S., Canada

What is the total proportion of all outstanding equity-based plans towards the share capital? (Q127)

- Incentive plans where stock options performance shares are granted to executives and employees will lead to a dilution of shareholder interests. Given the incentivizing nature of such instruments, shareholders generally accept such dilution, provided the dilution is limited.
ISS Governance QualityScore will consider the total proportion of all outstanding equity based incentive plans (granted as well as still to be granted) at the company level.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, AsiaPac*, Australasia, Latin America, Africa, Russia, South Korea, India

Is there a maximum level of dilution per year? (Q128)

In line with the question above, dilution due to long-term incentives can be capped on an annual basis, which is considered good practice.

ISS Governance QualityScore will consider whether the company has capped the level of dilution on a yearly basis.

This factor has a zero-weight impact on the scoring model for companies in the Germanic region and is included for informational purposes only.

Market Applicability: W. Europe, Germanic, Anglo, AsiaPac

Does the company's equity grant rate exceed the mean +1 standard deviation of its industry/index peers? (Q130)

Investors favor equity grants that align the interests of executives and employees with shareholders without creating excessive dilution in share value. ISS Governance QualityScore will evaluate and consider a company’s burn rate, which refers to the average annual rate at which stock options and stock awards are granted (sometimes referred to as share utilization) relative to the rate that is one standard deviation higher than the mean of the company’s applicable index and industry. For more details, see the ISS Policy Gateway.

Market Applicability: U.S.

What are the pricing conditions for stock options granted to executives? (Q136)

Discounted options represent an immediate financial gain to the beneficiary equal to the market price minus the level of the discount. Investors prefer that options be priced at no less than 100 percent of the shares' fair market value.

ISS Governance QualityScore will consider pricing and disclosure of pricing levels, such as whether a discount is given, the value of the discount, whether the price is set at market price or at a premium, and if that premium is disclosed, or if no information is given. For companies in Australia and New Zealand, this is the difference between the strike price (exercise price) and market price on the date of grant.
Equity Risk Mitigation

Did the company disclose a clawback or malus provision? (Q155)

The presence of claw back provisions may help ensure that real pay is not given for fictitious performance. Claw backs refer to the ability for the company to recoup bonuses or other incentive compensation in the event of a fraud, restatement of results, errors/omissions or other events as may be determined. For the Canadian market, these could include recoupment of equity awards (unvested or vested) as well as annual incentive bonuses. ISS will consider only publicly disclosed clawback provisions that are already in place. For the U.S. market, ISS defines claw back as the company’s ability to recoup performance-based awards (including any cash-based incentive awards, at a minimum) in the event of fraud, restatement of results, errors/omissions or other activities related above. Best practice is to incorporate a company policy which goes beyond the requirement of Section 304 of the Sarbanes-Oxley Act. For Australia and New Zealand markets, this item measures whether the company has a provision stating that paid awards, either in cash or stock, may be reclaimed or withdrawn (“clawed back”) in certain circumstances, such as financial restatement or executive misconduct. This provision may be found in the company’s short-term or long-term incentive plans.

What are the minimum vesting periods mandated in the equity plan documents for stock options or SARs? (Q131)

A minimum vesting period ensures employee retention and alignment with shareholder interest. Best practice dictates that companies that disclose such information under a plan document or full text of the plan provide more transparency on the vesting requirements of stock options to be granted under a specific equity plan. For US market, this question is applicable for active equity incentive plans that provide for the issuance of options or SARs. Specifically, this question will evaluate all equity plans containing shares available for grant, and there is no limitation to only consider plans from the previous three years. Actual vesting terms of grants found under the award agreements and compensation discussion and analysis section of the proxy statement are not considered. ISS Governance QualityScore considers the minimum vesting requirement, which is specified in a shareholder approved equity plan. In case the company has multiple equity plans that are active, ISS Governance QualityScore will consider the plan with the shortest vesting requirement. The minimum vesting requirement must apply to options and SARs issuable under the plan (time-based and...
ISS Governance QualityScore
Overview and Updates

performance-based) and must cover all eligible plan participants for credit to be given. No credit will be given if the plan allows for individual award agreements or other mechanisms to eliminate the requirement.

For non-US markets, this question is applicable for equity incentive plans that grant options or SARs that were proposed for shareholder approval or amendment within the past three years from the most recently concluded annual general meeting of the company. Actual vesting terms of grants found under the award agreements and compensation discussion and analysis section of the proxy statement are not considered. ISS Governance QualityScore considers the minimum vesting requirement, which is specified in a shareholder approved equity plan. In case the company amended/adopted multiple plans in the past three years, ISS Governance QualityScore will consider the plan with the shortest vesting requirement. Vesting for options and SARs must apply to all executives for credit to be given.

For US and Canada companies, credit for this question will only be granted if the minimum vesting restriction applies to at least 95% of all awards. Additional carve-outs, such as for grants for non-executive directors, will result in no credit being received on this question.

ISS Governance QualityScore will consider the minimum vesting period in terms of number of months before any options/SARs would vest, or if no information is given. Sourcing of the relevant information will be from plan documents rather than individual grant agreements or the proxy statement. In the case of ratable vesting, the earliest possible vesting will determine the scored minimum vesting period; for example, with three-year ratable vesting with the first vesting on the first anniversary of grant, this factor will be scored as “twelve months.”

To receive credit on this factor, companies should explicitly disclose that the first vesting event will occur no sooner than the first anniversary of the grant. This is because some companies disclose “ratable vesting” but then vest options in quarterly (or monthly) installments, or vest the first tranche on the date of grant.

Market Applicability: All regions except Japan

What are the minimum vesting periods mandated in the equity plan documents for restricted stock? (Q132)

A minimum vesting period ensures employee retention and alignment with shareholder interest.

Best practice dictates that companies that disclose such information under the plan document or full text of the plan provide more transparency on the vesting requirements of full value awards to be granted under a specific equity plan.

For US market, this question is applicable for active equity incentive plans that provide for the issuance of any type of full-value awards (e.g. restricted stock, performance stock, etc). Specifically, this question will evaluate all equity plans containing shares available for grant, and there is no limitation to only consider plans from the previous three years. Actual vesting terms of established grants under the award agreements and compensation discussion and analysis section of the proxy statement are not considered. Only the minimum vesting requirement which is specified in a shareholder approved equity plan will be counted. In case the company has multiple equity plans that are active, ISS Governance QualityScore will
consider the plan with the shortest vesting requirement. The minimum vesting requirement must apply to all types of full-value awards issuable under the plan (time-based and performance based) and must cover all eligible plan participants for credit to be given. No credit will be given if the plan allows for individual award agreements or other mechanisms to eliminate the requirement.

› For non-US market, this question is applicable for equity incentive plans that grant stock awards that were proposed for shareholder approval or amendment within the past three years from the most recently concluded annual general meeting of the company. Actual vesting terms of established grants under the award agreements and compensation discussion and analysis section of the proxy statement are not considered. Only the minimum vesting requirement which is specified in a shareholder approved equity plan will be counted. In case the company amended/adopted multiple plans in the past three years, ISS will consider the plan with the shortest vesting requirement. Vesting for options and SARs must apply to all executives for credit to be given.

› For US and Canada companies, credit for this question will only be granted if the minimum vesting restriction applies to at least 95% of all awards. Additional carve-outs, such as for grants for non-executive directors, will result in no credit being received on this question.

› ISS Governance QualityScore will consider the vesting period in terms of number of months, or, if the company does not grant restricted stock or the question is not applicable. Sourcing of the relevant information will be from plan documents rather than individual agreements or the proxy statement. In the case of ratable vesting, the earliest possible vesting will determine the scored minimum vesting period; for example, with three-year ratable vesting with the first vesting on the first anniversary of grant, this factor will be scored as “twelve months.”

› To receive credit on this factor, companies should explicitly disclose that the first vesting event will occur no sooner than the first anniversary of the grant. This is because some companies disclose “ratable vesting” but then vest options in quarterly (or monthly) installments, or vest the first tranche on the date of grant.

Market Applicability: All regions except Japan

What are the vesting periods mandated in the plan documents, adopted or amended in the last three years, for executives’ other long-term plan? (Q133)

› A minimum vesting period ensures employee retention and alignment with shareholder interest.

› ISS Governance QualityScore will consider the vesting period in terms of number of months, or, if the company does not grant other long-term awards or the question is not applicable. Sourcing of the relevant information will be from plan documents or the proxy statement.

Market Applicability: Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, AsiaPac, Australasia, Latin America, Africa, Russia
What are the vesting periods mandated in the plan documents, adopted or amended in the last three years, for executives’ Matching plan? (Q323)

ISS Governance QualityScore will consider the vesting period in terms of number of months, or if the company does not match shares or options or the question is not applicable. Sourcing of the relevant information will be from plan documents or the proxy statement. A minimum vesting period ensures employee retention and alignment with shareholder interest.

Market Applicability: W. Europe

What are the vesting periods mandated in the plan documents, adopted or amended in the last three years, for executives' Deferral plan? (Q324)

ISS Governance QualityScore will consider the vesting period in terms of number of months, or if the company does not defer the receipt of shares or options or the question is not applicable. Sourcing of the relevant information will be from plan documents or the proxy statement. A minimum vesting period ensures employee retention and alignment with shareholder interest.

Market Applicability: W. Europe

What is the holding or retention period for stock options for executives? (Q134)

Executives should hold a meaningful portion of the shares acquired after exercise. A meaningful portion would generally be viewed as 50 percent or more of net shares (after paying tax liabilities) held or 25 percent of gross shares.

Research points to superior financial performance when officer and director stock ownership falls within a certain range. These are requirements to retain ownership of a portion of shares acquired after the exercising of an option, once specified stock ownership guidelines have been met by the executive and he/she is able to exercise the options. It is generally net of taxes, and may be offered as a percentage of shares acquired. The guidelines can apply to stock awards as well. The holding requirements of the stock can be for a set number of years following the exercise of the option or through the term of the executive’s employment or retirement, or a specified length of time following departure from company (hold until after retirement).

ISS Governance QualityScore will consider the required post-exercise holding period, if any, based on the number of months or if the period extends to or through retirement, or if no options are granted, or no information is given in the proxy statement. A meaningful portion of net shares held would generally be viewed as 50 percent or more, and when evaluating this question for U.S. companies, ISS Governance QualityScore will consider holding periods stipulated for named executive officers.
Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, S. Europe, AsiaPac, Australasia, Latin America

What is the holding or retention period for restricted shares or stock awards for executives? (Q135)

See Q134.

Market Applicability: U.S., W. Europe, Germanic, Anglo, S. Europe, AsiaPac, Australasia, Latin America

What proportion of the salary is subject to stock ownership requirements or guidelines for the CEO? (Q145)

› Best practice suggests that executives attain substantive share ownership by a certain time after appointment to better align their interests with those of shareholders.
› ISS Governance QualityScore will consider the percentage/multiple of salary subject to stock ownership requirements, or if no information is disclosed. CEO stock ownership guidelines require or encourage executives to own a certain amount of stock within a period of time. These guidelines are generally disclosed as a multiple of base salary, number of shares, or a dollar value. This factor relates to the multiple of the CEO’s cash fixed remuneration or base salary as a basis for the stock ownership guidelines.
› For the Australian and New Zealand Markets, this may also be disclosed a multiple of cash fixed remuneration.
› For the U.S., multiples of less than three times salary raise the level of governance risk concern. For other markets, multiples of less than one time salary or nondisclosure would raise governance risk concern.

Market Applicability: U.S., Canada, W. Europe, Anglo, S. Europe, Nordic, Australasia

What proportion of the salary is subject to stock ownership requirements or guidelines for executives, excluding the CEO? (Q146)

› Best practice suggests that executives attain substantive share ownership by a certain time after appointment to better align their interests with those of shareholders.
› ISS Governance QualityScore will consider the percentage/multiple of salary subject to stock ownership requirements, or if no information is disclosed. For the Australia and New Zealand markets, executive stock ownership guidelines require or encourage executives to own a certain amount of stock within a period of time. These guidelines are generally disclosed as a multiple of cash fixed remuneration, base salary, number of shares, or a dollar value. This factor relates to the multiple of the other executives’ cash fixed remuneration or base salary as a basis for the stock ownership guidelines.

Market Applicability: W. Europe, Anglo, S. Europe, Australasia
Non-Executive Pay

▶ Does the company provide loans to directors? (Q104)

› Any loans made to directors should be as part of a broad-based, company-wide plan available to all employees to encourage ownership rather than being given only to non-executive directors. Loans should be set at market interest rates, and require full repayment over a reasonable length of time.

› ISS Governance QualityScore will consider whether the company has granted loans to its non-executive directors and whether such loans are granted in the course of normal business activities.

Market Applicability: Canada, S. Europe, Russia

▶ Do directors participate in equity-based plans? (Q109)

› Best practice suggests non-executive directors not to participate in equity-based plans as this puts them at the same level of executives who should be monitored and remunerated by non-executive directors. Deferred share units (DSUs) received in-lieu of cash compensation are not considered for this question; however, DSUs or any other equity-based compensation given to directors in addition to retainer are included.

› ISS Governance QualityScore will consider whether non-executive directors will participate in equity based plans.

Market Applicability: Canada, W. Europe, Germanic, Nordic, S. Europe, Russia

▶ Do non-executive directors participate in performance-related remuneration? (Q110)

› Best practice requires non-executive directors not to participate in performance-based remuneration as this puts them at the same level of executives who should be monitored and remunerated by non-executive directors.

› ISS Governance QualityScore will consider whether non-executive directors participate in performance related remuneration schemes.

Market Applicability: W. Europe, Germanic, Anglo, S. Europe, Australasia, Latin America, Africa, Russia, India, AsiaPac

▶ What part of the total remuneration received by directors is options-based? (Q107)
Best practice suggests that directors should not receive options as remuneration but instead should receive equity as a retainer or in lieu of cash. The underlying rationale is that directors’ independence could be compromised and their interests more aligned with management than with shareholders in situations where director compensation is similar to executive compensation.

ISS Governance QualityScore will consider the percentage of options granted relative to the total remuneration received by non-executive directors if such information is disclosed.

**Market Applicability: Canada**

- Are directors eligible to receive grants or awards under the plan involved in its administration? (Q325)

ISS Governance QualityScore will consider whether directors receive grants or awards under a plan which they are responsible themselves for the administration of. Directors receiving grants under a plan that they are responsible for administering presents a clear conflict of interest.

**Market applicability: AsiaPac, Latin America, India**

**Communications and Disclosure**

- Does the company disclose the remuneration paid to the board in annual general meeting proxy filings? (Q341)

The best practice is to disclose the aggregate remuneration paid to the board members in the company's proxy filings. Most companies do not disclose such information in the proxy materials.

ISS Governance QualityScore will consider whether or not such disclosure was made in the proxy filings.

**Market Applicability: South Korea**

- Does the company disclose details of individual executives’ or inside directors’ remuneration? (Q112)

Best practice suggests companies to disclose complete and individual information on executives’ remuneration, especially for the CEO.

ISS Governance QualityScore will consider the level of disclosure on remuneration granted to executives, whether information is disclosed per individual and whether information contains breakdowns of the various remuneration components.

**Market Applicability: AsiaPac, S. Europe, Latin America, Russia, India, Japan**

- Does the company have a policy on executive remuneration and a computation basis for pay? (Q376)
Executive remuneration is typically a mixture of salary, bonuses, shares of or call options on the company stock, benefits, and perquisites, ideally configured to take into account government regulations, tax law, the desires of the organization and the executive, and rewards for performance. Corporate executive remuneration should be aligned with long-term goals and strategies and with long-term shareowner interests. Remuneration should be structured to achieve long-term strategic and value-creation goals.

Until recent years little attention had been paid to executive remuneration and executive pay policy in Japan and many still lacks a framework for setting and deciding executive pay. This question will consider whether the company has established a policy on executive pay as disclosed in the corporate governance report, but does examine the rigor of such policy.

Market Applicability: Japan

Does the company disclose a performance measure for the short-term incentive plan for executives? (Q113)

- Poor or missing disclosure of the financial basis for performance metrics make it difficult for investors to judge the quality and/or rigor of these metrics. ISS looks into performance measures used in awarding short-term incentives or annual bonuses to executives. Best practice is to disclose the target performance metrics at least on a retrospective basis.
- ISS Governance QualityScore will consider the extent of disclosure of specific performance criteria and disclosed hurdle rates for short-term, typically annual, cash incentive plans. By definition, the plan is one-year or less in the U.S. The performance measure(s) can be any type of objective pre-determined goal, often financial in nature, such as earnings per share or earnings before interest, tax, depreciation, and amortization.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, AsiaPac, Australasia, Africa, Russia

What is the level of disclosure on performance measures for long-term equity and cash awards granted in the last fiscal year? (Q246)

- Poor or missing disclosure of the financial basis for performance metrics make it difficult for investors to judge the quality and/or rigor of these metrics. ISS will evaluate long-term equity and cash awards granted in the most recent fiscal year based on pre-determined metrics and target goals.
- ISS Governance QualityScore will evaluate and consider whether performance conditions for the latest proposed long-term incentive plans are disclosed and measured by including, for example, targets compared with peer group performance, etc. This question combines several questions that examined disclosure of performance measures for different long-term pay instruments.

Market Applicability: U.S., Australasia, Russia
Does the company disclose a performance measure for matching? (Q121)

- Poor or missing disclosure of the financial basis for performance metrics make it difficult for investors to judge the quality and/or rigor of these metrics.
- ISS Governance QualityScore will consider the level of disclosure on performance measures for matching plans if such incentives have been granted to executives in the past year.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa

Does the company disclose a performance measure for stock option plans for executives? (Q122)

- Poor or missing disclosure of the financial basis for performance metrics make it difficult for investors to judge the quality and/or rigor of these metrics.
- ISS Governance QualityScore will consider the level of disclosure on performance measures for stock option plans if such incentives have been granted to executives in the past year.

Market Applicability: Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, AsiaPac, Latin America, Africa, India

Does the company disclose a performance measure for restricted share or stock award plans for executives? (Q123)

- Poor or missing disclosure of the financial basis for performance metrics make it difficult for investors to judge the quality and/or rigor of these metrics. For the Canadian market, full value awards are part of the executives' long-term incentive. Awards given under long-term incentive plans are either time-based, which are called restricted share units (RSUs); or performance-based, called performance share units (PSUs); or a combination of both. If the company has both plans, the PSU plan supersedes the RSU plan. ISS considers full value awards which are either granted from the company's treasury or purchased in open market.
- ISS Governance QualityScore will consider the level of disclosure on the performance basis (company targets or peer group performance) for restricted share plans if such incentives have been granted to executives in the past year.

Market Applicability: Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, AsiaPac, Latin America, Africa, India

Does the company disclose a performance measure for other long-term plans for executives? (Q125)

- Poor or missing disclosure of the financial basis for performance metrics make it difficult for investors to judge the quality and/or rigor of these metrics.
ISS Governance QualityScore will consider the level of disclosure on performance measures for other long-term plans if such incentives have been granted to executives in the past year.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, AsiaPac, Latin America, Africa

Does the company employ at least one metric that compares its performance to a benchmark or peer group (relative performance)? (Q353)

ISS Governance QualityScore will consider whether company pre-established metric, from the previous fiscal year, in any short term or long term incentive plan, is set relative (measured on relative terms) to an external group, such as a peer group, an index, or competitors.

Metrics are considered if the metric falls above the thresholds of determining either 15% of the overall compensation, or as a modifier able to adjust payouts both positively and negatively by at least 15%.

Market Applicability: U.S.

Has the company voluntarily adopted a management say-on-pay advisory vote resolution for the most recent annual meeting or committed to a resolution going forward? (Q166)

As the MSOP resolution is not mandatory in all markets, ISS Governance QualityScore will consider whether the company has adopted a voluntary say-on-pay advisory vote for management at the latest annual general meeting, or whether the company committed to such a resolution going forward.

Johannesburg Stock Exchange (JSE) has instituted listing rules requiring an advisory say-on-pay vote for JSE-listed companies, and therefore companies in the African market will only be penalized if they do not comply with JSE listing regulations.

Market Applicability: Canada, W. Europe, Africa

What is the level of disclosure on CEO ownership guidelines? (Q250)

As ownership guidelines in the German region are not common, ISS will only analyze the level of disclosure.

ISS Governance QualityScore will consider the level of disclosure on CEO ownership guidelines.

Market Applicability: Germanic
Termination

What is the trigger under the change-in-control agreements? (Q148)

› A single trigger requires only a change in control and no subsequent termination of employment or substantial diminution of duties for the executive to receive his/her exit pay package. A modified single trigger is similar, but provides a specific window period during which time the executive can leave employment for any reason. In both instances, the executive can unilaterally decide whether to continue employment and may not be sufficiently motivated to stay with the company long term given the prospect of unconditional payment. Moreover, if the board of the new company wishes to retain the services of the executive, they may negotiate any contract under circumstances that give the executive considerable leverage in seeking retention payments or additional compensation. A double trigger generally requires an actual termination of employment by the company or by the executive for good reason or a substantial diminution of responsibilities under the executive’s new role.

› ISS Governance QualityScore will evaluate and consider the type of trigger employed in change-in-control agreements, and the year the change-in-control agreement was entered into.

Market Applicability: U.S., Canada

Do equity-based plans or other long-term awards vest completely upon a change-in-control? (Q153)

› While change-in-control agreements have their place in order to insulate executives from loss of employment in conjunction with a change in control, accelerated vesting of the CEO or next highest paid officer's all outstanding equity grants tends to disconnect pay from performance and may incentivize executives to pursue transactions not in the best interests of shareholders. Best practice dictates that equity based plans vest in the event of termination of employment combined with a change of control transaction (double-trigger).

› ISS Governance QualityScore will consider vesting triggers for the CEO’s outstanding equity awards. This factor is specifically for the company's CEO. If the company has a new CEO, the provisions for his/her equity remuneration would be captured. ISS Governance QualityScore will consider vesting triggers for all outstanding equity awards of the CEO. If the company disclosed multiple events related to the treatment of equity upon CIC, ISS will consider the specific event applicable to the highest number of outstanding equity awards.

› The possible answers for this question are: Auto accelerated vesting; Converted/Assumed; Accelerated if not assumed; Vest only upon termination; Full board discretion; Other; Information on change-of-control provisions cannot be determined due to inadequate disclosure; and the company does not issue equity based awards.

Market Applicability: U.S., Canada, Australasia, Latin America
In the event of termination of the contract for executives, does the equity-based remuneration vest? (Q150)

- Accelerated vesting of equity grants or even continued vesting after termination of contracts of executives tends to disconnect pay from performance.
- ISS Governance QualityScore will consider the treatment of equity awards upon termination of an executive’s contract. This question addresses executives’ contracts only, not the CEO’s which is in a separate question. ISS Governance QualityScore will look for provisions on the treatment of equity in the event the executive’s contract has been terminated without cause, such as redundancy.

Market Applicability: Australasia, S. Europe

What is the multiple of pay in the severance agreements for the CEO upon a change-in-control? (Q161)

- Under ISS' benchmark policy, severance payments (in Europe) upon a change of control (all other regions) that are in excess of a one time (Netherlands), two times (Canada and Europe), or three times (U.S.) the base salary and bonus are problematic in all instances and considered excessive for all named executive officers. The 'pay' mentioned in this question includes only base salary and bonus. Long-term cash and/or equity awards are not considered for this question.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa, Russia

What is the basis for the change-in-control or severance payment for the CEO? (Q247)

- ISS Governance QualityScore will consider the basis upon which change-in-control or severance payments for the CEO are calculated.
- The possible answers for this question are: No Information; Salary; Salary + Average Bonus; Salary + Most Recent Bonus; Salary + Maximum Bonus; Salary + Other; Salary + Last/Highest Paid Bonus; and Salary + Target Bonus
- For markets outside the U.S., termination pay elements may include either (or a combination) of the following: salary, bonus, and benefits.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa, Russia

What is the multiple of pay in the severance agreements for executives, excluding the CEO, upon a change-in-control? (Q160)

- Under ISS’ benchmark policy, payments that are in excess of one time (Netherlands), two times (Canada and Europe), or three times (U.S.) base and bonus multiple are problematic in all instances and considered...
excessive for all named executive officers. Multiples equal to or below mentioned base and bonus are considered acceptable, per ISS' policy.

ISS Governance QualityScore will consider what multiple of salary plus bonus executives will receive under employment agreements due to a change-in-control event or termination of contract.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa, Russia

What is the basis for the change-in-control or severance payment for executives excluding the CEO? (Q248)

Payments based on base salary plus target or actual bonuses are acceptable. A payment based on the maximum bonus, or particularly on the “greater of” actual and maximum, is considered excessive.

ISS Governance QualityScore will consider what the basis upon which change-in-control or severance payments for executives are calculated.

In markets outside the US, termination pay elements may include either (or a combination) of the following: salary, bonus and benefits.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa, Russia

How long is the notice period for the CEO if the company terminates the contract? (Q152)

When a company terminates the contract of the CEO, it is, in most cases, obliged to continue contractual payment until a certain period. Shareholders accept this provided the notice period is limited to six months.

ISS Governance QualityScore will consider the length of the notice period for the CEO if the company terminates the contract.

Market Applicability: Australasia, S. Europe

Does the company provide excise tax gross-ups for change-in-control payments? (Q162)

An excise tax is an additional tax imposed by the IRS for change-in-control related severance pay that exceeds three times an executive's average taxable income—including salary, bonus, and the gains on any equity compensation—over the previous five years. While excise tax-gross-ups became somewhat common during the 1990s, recent shareholder opposition to the practice has led many companies to eliminate the provision, based on rationale that executive officers should be responsible for their individual tax liabilities and that common market practice does not justify extraordinary financial burdens to companies and their shareholders. Further, the excise tax gross-up provision leads to such substantial increases in potential termination payments that it may encourage executives to negotiate merger agreements that may not be in the best interests of shareholders. Companies have begun to provide for packages to be reduced to the
extent necessary not to trigger the excise tax. In some instances, the company may commit to lower a severance payment to just below the cap in limited circumstances, but to pay a gross-up if the payment exceeds that level, which does not address the fundamental problems with these features.

ISS Governance QualityScore will consider whether gross-ups for change-in-control payments are made, whether the company provided gross-ups, but made a commitment not to provide them upon change-in-control in the future, whether the company implemented gross-up provisions in a contract that was new or materially amended within the past year, and whether the company provides tax gross-ups in one or more contracts, but none were entered into or materially amended last year. The question applies to all executives, not just the CEO.

Market Applicability: U.S., Canada

What is the length of employment agreement with the CEO? (Q163)

Best practices dictate that companies should not enter into fixed-duration employment contracts with executives, and if they do, only enter into employment contracts under limited circumstances for a short time period (e.g., new executive hires for a three-year contract) for a finite number of executives. The individual agreements should not have an automatic renewal feature and should have a specified termination date. An auto-renew feature indicates that the agreement can be extended in perpetuity, for all intents and purposes, unless either party provides direction to the contrary pursuant to a defined notice period.

This factor has a zero-weight impact on the scoring model and is included for informational purposes only.

Market Applicability: U.S.

Compensation Controversies

Has the ISS qualitative review identified a pay-for-performance misalignment? (Q300)

ISS’ qualitative analysis of executive compensation identifies pay practices and design features that may strengthen or weaken the linkage between executive pay and company performance. Features and practices to be examined in ISS’ qualitative analysis may include (but are not limited to): the rigor of performance conditions on incentive plans, the proportion of performance-based equity pay, whether termination provisions may enable “pay for failure,” the presence of retention or other discretionary awards, “realizable” pay relative to granted pay, and other features of the pay design as deemed appropriate to the company’s specific circumstances.

Market Applicability: U.S., Canada
Has ISS identified a problematic pay practice or policy that raises concerns? (Q301)

» ISS’ focus is on specific executive compensation practices that run counter to a pay-for-performance philosophy, including, but not limited to: problematic practices related to non-performance-based compensation elements such as excessive perquisites; incentives that may motivate excessive risk taking; and specific problematic practices such as options backdating or repricing options held by top executives and/or directors or repricing any options without shareholder approval.

Market Applicability: U.S., Canada, W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia, Latin America, Africa, Russia, India

Did the most recent Say-on-Pay proposal receive significant opposition from shareholders? (Q328)

» ISS Governance QualityScore will consider the level of shareholder support on the most recent Say-on-Pay proposal at the last annual meeting where the say on pay proposal was up for vote. U.S. company meeting results are compared to 70 percent of votes cast, while Australian company meeting results are compared to 75 percent, which are when ISS’ policies initiate a review of the Board’s responsiveness to the low shareholder support for the applied markets.

» From the date of publication of the ISS proxy research report until the meeting results are available, this question will be pending and the result will indicate “meeting results in progress” for this factor.

Market applicability: U.S., Australia

What was the percentage of vote support received from shareholders on the most recent Say-on-Pay or remuneration proposal? (Q385)

» This factor will display the actual percentage level of shareholder support on the most recent resolution to Approve the Remuneration Report at the last annual meeting where the proposal was up for vote.

» From the date of publication of the ISS proxy research report until the meeting results are available, this question will be pending and the result will indicate “meeting results in progress” for this factor.

» Companies in regions where this factor is applied, but the local jurisdiction does not require say-on-pay/remuneration proposals (such as Canada), will not be penalized for not having a proposal.

» If there are multiple Say-on-Pay or remuneration proposals, ISS will evaluate this factor for the proposal with the lowest level of support.

Shareholder Rights & Takeover Defenses

One-Share, One-Vote

Does the company have classes of common stock with different voting rights? (Q54)

- Dual-class capital structures can serve to entrench certain shareholders and management, insulating them from possible takeovers or other external influence or action. The interests of parties with voting control may not be the same as those of shareholders constituting a majority of the company’s outstanding capital. Additionally, research suggests that companies with dual-class capital structures or other antitakeover mechanisms often trade at a discount to similar companies without such structures.
- The question will evaluate whether the company has issued stock types with different voting rights. Convertible securities entitled with various voting right which is equal to the number of converted common shares are excluded.
- This factor has a zero-weight impact on the scoring model for Australasian companies and is included for informational purposes only.

Market Applicability: All regions except Japan and India

What is the proportion of votes outstanding controlled by shares with enhanced voting rights? (Q384)

- This question helps investors differentiate between cases where multi-class share structures severely impair base-class shareholder rights, vs cases where there is minimal impact.
- Answers to this factor will be calculated as the percentage of voting rights held by classes of shares with superior voting rights to the lowest class of shares. For companies with non-voting shares outstanding, this figure will be one hundred percent.
- ISS QualityScore will consider companies with five percent or less of the voting voting power concentrated in enhanced voting rights shares as a minimal issue. Progressively more credit is lost for incremental concentrated voting power; maximum credit is lost when a majority of voting power is concentrated in enhanced voting rights shares.
- Voting power is an important right of shareholders. Starting in late 2017, major index provider FTSE Russell stated it would apply to its index eligibility a minimum hurdle rate for percentage of voting rights in the hands of non-restricted shareholders. Companies with less than five percent of voting rights held by unrestricted public shareholders would be ineligible for inclusion in the standard FTSE Russell indices. Starting August 1, 2017, S&P Dow Jones Indices said it would exclude companies with multiple share-class structures from joining the S&P Composite 1500 and component indices. This policy does not apply to existing constituents.

Market Applicability: US, Canada*
Does the company have a class shares with full or multiple voting rights? (Q369)

Issuing shares with multiple voting rights is often claimed by proponents that it allows the founders and management to maintain control over the strategic direction of the company. Such a structure helps them focus on the long-term growth of the company instead of immediate financial return. It is also seen to be a tool to defend against unwanted takeover attempts, as the controlling parties can vote down takeover proposals by exercising their voting power. On the other side, weighted voting right structures are considered to be problematic, because such governance structures, with superior voting power held by a group of associated persons, increase the risk that the management may pursue projects that are not in the best interests of the company but for their own good. This deteriorated agency problem may imply higher cost of capital on future fund raising.

Similarly, class shares with full voting rights violates the principle of one-share-one-vote, and could contribute to board and management entrenchment.

Market Applicability: Japan

Are there any directors on the board who are not up for election by all classes of common shareholders? (Q55)

Barring some holders of common stock from voting on directors may serve to entrench board members and perpetuate control by certain blocks or groups.

ISS Governance QualityScore will consider whether any directors are not elected by all classes of common stock.

Market Applicability: U.S., Canada

Is there a sunset provision on the company's unequal voting structure? (Q56)

Some companies with unequal voting structures have set the conditions upon which the unequal voting structure will be terminated and an equal voting structure will take place. Such a condition is called a “sunset provision” in this regard.

ISS Governance QualityScore will consider whether unequal voting structures include a sunset (termination) provision, or whether the question is not applicable because there is no such structure.

Market Applicability: U.S., Canada

What is the proportion of multiple voting rights (or voting certificates) relative to the total number of voting rights? (Q57)
This is the first part of a double materiality test where the impact of the multiple voting rights on the total number of voting rights is measured.

ISS Governance QualityScore will consider the percentage of multiple voting rights relative to total voting rights.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, Africa

What is the level of free float of the multiple voting rights or voting certificates? (Q58)

ISS will consider the percentage of free float of the multiple voting rights, or if no information is given. This is the second part of a double materiality test where the level of free float of multiple voting rights is measured.

ISS Governance QualityScore will consider the percentage of free float of the multiple voting rights, or if no information is given.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, Africa

What percentage of the company's shares is represented by depositary receipts, where a foundation votes unexercised proxies? (Q59)

Depositary receipts have typically been issued by Dutch companies in order to keep minority shareholders from exerting disproportionate influence at general meetings where attendance is often low. Under this system, the underlying shares are nearly all held by a foundation, which is usually independent of the company (Question 62) that has issued the depositary receipts. These instruments are sold on the market. Holders of such instruments are entitled to the same rights as ordinary shareholders, save for voting rights. In order to vote, the holders need to request a voting proxy from the foundation, or they can exchange their depositary receipts for the underlying shares. Taking these steps can sometimes be restricted either by limitations on the ability to request voting proxies or to exchange depositary receipts for shares.

ISS Governance QualityScore will measure the percentage of company shares which are represented by depositary receipts for which the foundation will execute voting rights unless a voting proxy has been requested should this possibility exist.

Market Applicability: W. Europe

Has the company indicated an intent to eliminate the system of depositary receipts? (Q60)

Over the past 10 years, Dutch companies have gradually eliminated the system of depositary receipts based on attendance of shareholders at general meetings. In general, if attendance of shareholders in the past...
three years has reached thresholds of 30 percent or higher, a number of Dutch companies have committed to eliminating the system.

This question will consider whether the company has indicated publicly to consider eliminating the system of depository receipts.

Market Applicability: W. Europe

Are depositary receipt holders restricted in their voting rights? (Q61)

Traditionally depositary receipts could be exchanged for shares or holders of such depositary receipts could request a voting proxy, but only to a certain limit (usually between 1 and 2 percent of the share capital). Dutch companies have mostly eliminated these barriers.

ISS Governance QualityScore will consider whether holders of depositary receipts can request for voting proxies or exchanging their depositary receipts in shares are limited in their right.

Market Applicability: W. Europe

What percentage of the company's share capital is made up of non-voting shares? (Q63)

This is the first part of a double materiality test where the impact of the non-voting shares on the total share capital is measured. The issue of preferential non-voting shares where the lack of voting is compensated by a higher or guaranteed dividend is accepted up to a certain level. However, beyond that level, the influence of shareholders on company decisions can be hampered, especially if the level of free float of the voting rights is limited.

This question will measure the proportion of non-voting shares relative to the total share capital of the company.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa, Russia

What is the level of free float of voting shares in relation to the non-voting shares? (Q64)

ISS will measure the level of free float of the voting rights in a system of various share types with at least one of the share types lacking voting rights. This is the second part of a double materiality test where the level of free float of voting rights is measured.

ISS Governance QualityScore will measure the level of free float of the voting rights in a system of various share types with at least one of the share types lacking voting rights.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Africa, Russia
Does the company have an absolute voting right ceiling? (Q65)

The existence of an absolute voting right ceiling, which caps the vote after a certain threshold has been reached, always creates a voting right distortion for the shareholders whose stake lies above the ceiling. The lower the ceiling, the more shareholders see their voting rights reduced and the larger the voting right distortion.

ISS Governance QualityScore will consider whether a ceiling expressed as a proportion of all shares outstanding is in place, the percentage of the ceiling, or if no information is disclosed.

Market Applicability: W. Europe, Germanic, Nordic, S. Europe, Latin America

Does the company have a relative voting right ceiling? (Q66)

The existence of a relative voting right ceiling, which caps the vote after a certain threshold has been reached, always creates a voting right distortion for the shareholders whose stake lies above the ceiling. The lower the ceiling, the more shareholders see their voting rights reduced and the larger the voting right distortion.

ISS Governance QualityScore will consider whether a ceiling expressed as a proportion of all shares represented at the general meeting is in place, the percentage of the ceiling or if no information is disclosed.

Market Applicability: W. Europe, Germanic, Nordic, S. Europe

Does the company have an ownership ceiling? (Q67)

A discounted score for the existence of ownership ceilings is meant to reflect the tendency of investors to discount companies featuring ownership ceilings; as such ceilings curb investments and thus limit the voting power shareholders may attain.

ISS Governance QualityScore will consider whether an ownership ceiling expressed as a proportion of all shares outstanding is in place, the percentage of the ceiling or if no information is disclosed.

Market Applicability: Japan, W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia, Latin America, Africa, Russia

Does the company have ownership ceilings for specific parties? (Q68)

A discounted score for the existence of ownership ceilings is meant to reflect the tendency of investors to discount companies featuring ownership ceilings, as such ceilings curb investments and thus limit the voting power shareholders may attain, especially if such ceiling applies only to one group of shareholders.
ISS Governance QualityScore

Overview and Updates

ISS Governance QualityScore will consider whether, in the event the company has installed an ownership ceiling, it is applicable to all shareholders or only to a certain category of shareholders (such as foreign investors).

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Australasia, Latin America, Africa, Russia

Do shareholders or the State have the priority right? (Q69)

The investor community generally disapproves of special shares that grant disproportionately high voting powers to the State (golden shares) or other specific shareholders (referred to as priority shares).

ISS Governance QualityScore will evaluate and consider the existence of priority rights held by the State or specific shareholders and will qualify the nature of such rights into high or low importance.

The factor will consider the priority rights of high importance if the specific shareholder or the State has the right to directly appoint more than 50% of executives, directly appoint directors representing more than 50% of directors, or veto the appointment of directors representing more than 50% of directors.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Latin America, Africa, Russia

Is there a coattail provision attached to the company's unequal voting structure? (Q217)

Coattail provisions provide protection for minority shareholders when a majority shareholder exists under a dual capital structure, i.e. during a take-over bid, a similar offer is made to the "subordinate" share with that of the "superior" shares.

ISS Governance QualityScore will consider whether the company has an unequal voting structure and whether a coattail provision has been attached to the structure.

Market Applicability: Canada

Takeover Defenses

Does the company have targeted stock placement that can be used as a takeover defense? (Q72)

At their holders’ discretion, financial instruments giving potential access to the company’s capital may be exercised and may compromise the success of a takeover attempt through the dilution of the percentage of voting rights available on the market. Holders of these instruments may or may not be existing shareholders of the company.

This question will measure the impact of targeted stock placement in the event of a takeover bid which the company can use as a defense.
Market Applicability: W. Europe, S. Europe, S. Korea

Does the company maintain preemptive rights in the event of a takeover bid? (Q73)

- Authorizations given to the management board to increase share capital do not always preserve preemptive rights for existing shareholders, and may even sometimes be allowed during a takeover in certain markets.
- This question will measure the impact of the possibility of the company to issue shares and restrict preemptive rights which it can use as a defense in the event of a takeover bid.

Market Applicability: W. Europe, S. Europe

Can the company target repurchased shares in the event of a takeover bid? (Q74)

- Shares are usually repurchased either to minimize the dilution of employee share plans, to fund a share exchange for acquisitions, or to increase earnings per share (by stabilizing the share price). At the same time, a share repurchase could also be used as a takeover defense, which reduces the voting power of the floating capital and increases the relative voting power of the reference or core shareholder(s). This may happen when the company repurchases its own shares during a takeover and when voting rights of repurchased shares are temporarily or permanently (when repurchased shares are destroyed) cancelled. It could also increase the voting power of friendly parties (existing reference or core shareholders, the “White Knight” defense) when the company resells shares that have been repurchased prior to or even during a takeover.
- This question will measure the impact of the possibility of the company to repurchase own shares which it can use as a defense in the event of a takeover bid.

Market Applicability: W. Europe, Nordic, S. Europe

Are there ownership factors that affect takeover defenses? (Q218)

- Ownership factors, such as ceilings, preclude the success of a takeover attempt while denying shareholders a takeover premium and potentially entrenching the company’s management.
- ISS Governance QualityScore will consider the existence of ownership ceilings which hamper the success of a takeover bid on the company.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Latin America, Africa, Russia

Are there priority rights that affect takeover defenses? (Q219)
Priority rights afford holders the right to decide on key corporate actions such as takeovers that are normally sanctioned by shareholders collectively. Such rights can be vested in specific share types, such as priority shares. These rights may be linked to a specific company structure where certain shareholders hold rights beyond normal voting rights. If such rights are granted to the state, they are called golden shares.

ISS Governance QualityScore will consider the existence of priority rights with which the State or specific shareholders can block takeover bids on the company.

Market Applicability: W. Europe, Germanic, Anglo, Nordic, S. Europe, Latin America, Africa, Russia

Are all directors elected annually? (Q77)

Classifying the board makes it more difficult for shareholders to remove ineffective directors, or to change control of a company through a proxy contest involving the election of directors. Because only a minority of the directors is elected each year, a dissident will be unable to win control of the board in a single election and would need two years to gain control of the company unless there are vacancies in the other classes. Studies have shown a negative correlation between the existence of a classified board and a firm’s value.

ISS Governance QualityScore will consider whether all directors are elected each year, rather than in staggered terms—often referred to as a classified board. ISS Governance QualityScore will also consider whether companies are transitioning to a declassified board, as defined when a company receives shareholder approval for the switch, but annual elections of all members has not yet commenced.

ISS Governance QualityScore will also consider whether a company, though currently elected annually, could classify its board without shareholder approval.

This factor has a zero-weight impact on the scoring model for Latin American companies and is included for informational purposes only.

Market Applicability: U.S., Canada, Japan, Latin America*

Is the board authorized to issue blank check preferred stock? (Q83)

Authorization to issue blank check preferred stock gives the board the power to issue, at its discretion, preferred stock with voting, conversion, distribution, and other rights to be determined by the board at the time of issue. Although authority to issue preferred shares gives the company flexibility to meet the company’s broad finance needs, these placements can dilute existing shareholders' equity and voting positions.

Preferred stock can be used for sound corporate purposes such as raising capital or making acquisitions. In these cases, blank check implies flexibility in meeting the company’s broad finance needs. By not establishing the terms of preferred stock at the time the class of stock is created, companies maintain the flexibility to tailor their preferred stock offerings to prevailing market conditions. Nevertheless, blank check preferred stock can be used as an entrenchment device, to fund a poison pill for example. Albeit less
common today, another powerful takeover defense is the placement of large blocks of blank check preferred stock, with friendly third parties—the so-called “white knight” rescue. Blank check preferred stock would not be as objectionable to shareholders if a company stated in writing that such shares would be “declawed” and not be used to thwart a potential takeover. Declawed blank check preferred stock means that the board cannot authorize shares of preferred stock without shareholder approval that can be used in takeover defense purposes.

ISS Governance QualityScore will consider whether the board is authorized to issue blank check preferred stock, and whether the stock, if authorized, is declawed.

Market Applicability: U.S., Canada, South Korea

Does the company have a shareholder rights plan (poison pill) in effect? (Q78)

Institutional investors view poison pills, which can make a hostile acquisition attempt prohibitively expensive, as among the most onerous of takeover defenses that may serve to entrench management and have a detrimental impact on their long-term share value. While recognizing that boards have a fiduciary duty to use all available means to protect shareholders’ interests, investors often argue that, as a best governance principle, boards should seek shareholder ratification of a poison pill (or an amendment thereof) within a reasonable period.

ISS Governance QualityScore will consider whether the company has a shareholder plan in effect, and whether the poison pill has been approved by shareholders. For Canadian companies, ISS will also consider if the shareholder rights plan meets the necessary requirements under the guidelines for new generation pills.

Market Applicability: U.S., Canada, Japan

What is the trigger threshold for the poison pill? (Q79)

Poison pill triggers typically range from 10 to 25 percent. Best practice is for a pill (other than an NOL pill) to have a trigger no lower than 20%.

ISS Governance QualityScore will consider the trigger percentage for the pill.

Market Applicability: U.S.

Does the poison pill have a sunset provision? (Q80)

Poison pills with scheduled dates of termination mean that the decision to maintain the poison pill must be periodically revisited and, ideally, resubmitted for shareholder approval.
ISS Governance QualityScore will consider whether the plan includes a provision which permits shareholders to reaffirm or redeem a poison pill within a specified time period.

Market Applicability: U.S.

Does the poison pill have a qualified offer clause? (Q82)

Well-designed pills provide the company with negotiating power and time to receive the best possible offer for shareholders. Qualified offer clauses empower shareholders to redeem the pill and accept a valid takeover offer.

ISS Governance QualityScore will consider whether the plan includes a clause allowing shareholders to redeem the pill in the face of a bona fide takeover offer.

Market Applicability: U.S.

What is the expiration date of the poison pill? (Q91)

While long-term pills may tend to serve as a device to entrench management, shorter-term pills are more likely to be in response to particular market or company circumstances, and require, the board to revisit the decision to institute the rights plan.

ISS Governance QualityScore will consider the number of years until sunset or termination date of the plan.

Market Applicability: U.S.

Is the poison pill designed to preserve tax assets (NOL pill)? (Q220)

An NOL Pill is a shareholder rights plan with a low trigger that is meant to preserve the value of net operating loss carry forwards (NOLs), a tax benefit accrued by companies that can potentially reduce their future tax liability. Per IRS rules, these tax-loss assets are forfeited upon a defined change in control; as such, NOL pills are designed to preserve shareholder value.

ISS Governance QualityScore will consider whether the pill is designed to preserve tax assets.

Market Applicability: U.S.

When was the poison pill implemented or renewed? (Q222)

ISS Governance QualityScore will consider how long ago the board most recently took action on the pill, whether to implement it or renew it.
Market Applicability: U.S.

- **Does the company’s poison pill include a modified slow-hand or dead-hand provision? (Q223)**
  - “Dead hand” and “slow hand” provisions that prevent the redemption of the poison pill are egregious and unjustifiable violation of shareholders’ rights to accept an attractive takeover offer, even after replacing members of the board.
  - ISS Governance QualityScore will consider as to whether the implementation of the pill inhibits or prohibits the ability of future boards of directors to redeem the pill. A slow-hand provision forces a delay in the redemption of the poison pill even if shareholders of the target firm favor the takeover. A dead-hand provision provides that only the incumbent directors, continuing directors, or their designated successors can redeem the poison pill, even after they have been voted out of office (thus precluding redemption).

Market Applicability: U.S.

- **Was the poison pill approved by shareholders? (Q221)**
  - The board of directors should seek shareholder ratification of a poison pill (or an amendment thereof).
  - ISS Governance QualityScore will consider whether the poison pill was approved by a majority of shareholders. Voting results are considered as a majority of votes cast, abstentions included but excluding broker non-votes.

Market Applicability: Japan

- **Does the company have a controlling shareholder? (Q290)**
  - When there is a controlling shareholder, the minority shareholders may face challenges in matters where their interests diverge from those of the majority shareholder.
  - ISS Governance QualityScore will consider whether the company has a shareholder or shareholders acting in concert and holding a majority of the voting rights.
  - This factor has a zero-weight impact on the scoring model for U.S., Southern European, and Australasian companies and is included for informational purposes only.

Market Applicability: U.S., AsiaPac, Japan, S. Europe, Australasia, Latin America, Africa, Russia South Korea, India

- **If the company has a majority voting standard, is there a plurality carve-out in the case of contested elections? (Q224)**
Best practice calls for a majority vote standard in uncontested director elections, and a plurality vote standard in contested elections. Otherwise, in a contested election, even if a dissident nominee receives more votes than a management nominee, the management nominee would be seated. ISS Governance QualityScore will consider as to whether the majority voting standard – if in place – does not apply in the case of contested elections. Some companies incorporated outside of the U.S. do not have a “contested situation”: all nominees (whether management or shareholder-nominated) who receive a majority of votes cast are seated on the board. This situation is included in the possible answers.

Market Applicability: U.S.

Does the removal of a director require a supermajority vote? (Q284)

Japanese directors can be removed by a simple majority shareholder vote, unless the articles require a supermajority. The supermajority requirement can serve as a form of management entrenchment.

Market Applicability: Japan

What is the level of tag-along rights for minority shareholders? (Q333)

Tag along rights are granted to minority shareholders when a company reached an agreement with a major shareholder to take over the company at a certain price. The tag along rights will indicate at what level minority shareholder can sell their shares to the acquiring shareholder. In principle minority shareholders should be allowed to receive the same price.

Tag along rights are provided by Brazilian law (Lei das S.A., Article 254-A) and assure that the disposal, direct or indirect, of a company’s control shall be carried out on conditions that the buyer undertakes to tender a public offer for acquisition of all common shares held by the other shareholders in the company, so that they may be accorded as minimum price 80% of the value paid for the selling controlling shareholder. Some companies have decided voluntarily to extend tag along rights to preferred shareholders, and/or assure to the common shareholders a price above 80%.

ISS Governance QualityScore will consider the level of tag along rights in the event of a takeover bid.

Market applicability: Latin America

Meeting & Voting Related Issues

Does the company require a supermajority vote to approve amendments to the charter or bylaws? (Q89)
Supermajority provisions violate the principle that a simple majority of voting shares should be all that is necessary to effect change regarding a company and its corporate governance provisions. Requiring more than this may permit management to entrench itself by blocking amendments that are in the best interests of shareholders.

ISS Governance QualityScore will consider whether a super-majority vote is required, or if no information is given. Supermajority is defined as anything above simple majority. ISS generally sees thresholds of two-thirds or 75 percent but anything above simple majority (typically, 66.66 percent or higher) is characterized as supermajority.

ISS Governance QualityScore will also consider whether shareholders have the right to amend the bylaws. In the U.S., under SEC Rule 14a-8, shareholders who have held shares valuing at least $2,000 for one year are permitted to submit shareholder proposals, both precatory and binding, to amend bylaws. However, some states allow companies, in their charters, to restrict shareholders’ right to amend the bylaws through binding bylaw amendments or proxy fights.

In the Italian market, the factor considers if a supermajority vote requirement is at the statutory minimum.

Market Applicability: U.S., S. Europe, Canada

Does the company require a supermajority vote to approve mergers or business combinations? (Q90)

Supermajority provisions violate the principle that a simple majority of voting shares should be all that is necessary to effect a merger. For companies that are controlled, however, supermajority provisions may help ensure that the controlling shareholder cannot unilaterally force a merger despite the opposition of minority shareholders.

ISS Governance QualityScore will consider whether a super-majority vote is required, or if no information is given. Supermajority is typically defined as anything above simple majority. ISS generally sees thresholds of two-thirds or 75 percent but anything above simple majority is characterized as supermajority.

Market Applicability: U.S., Canada

Does the company have discretion over dividend payments? (Q285)

According to Japanese corporate law, dividend payments require shareholder approval, unless the company articles state that the board has this authority.

ISS Governance QualityScore will consider whether the company has discretion over dividend payments.

Market Applicability: Japan, South Korea

Are shareholders allowed to submit dividend proposals? (Q286)
Investors should have the ability to submit shareholder proposals on dividends in cases where investors see existing dividend practice as problematic.

ISS Governance QualityScore will consider whether shareholders are allowed to submit proposals on dividends.

Market Applicability: Japan

Are the names of the nominee directors disclosed? (Q334)

ISS Governance QualityScore will consider whether shareholders are allowed to submit proposals on dividends.

Market Applicability: Latin America

What proportion of shares must be represented at the general meeting to cancel the binding nature of the nomination of supervisory board members and/or executive board members? (Q84)

According to the Dutch Code of Corporate Governance (December 2008), the general meeting of shareholders of a company not having statutory two-tier status may pass a resolution to cancel the binding nature of a nomination for the appointment of a member of the management board or of the supervisory board and/or a resolution to dismiss a member of the management board or of the supervisory board by an absolute majority of the votes cast. It may be provided that this majority should represent a given proportion of the issued capital, which proportion may not exceed one-third. If this proportion of the capital is not represented at the meeting, but an absolute majority of the votes cast is in favor of a resolution to cancel the binding nature of a nomination, or to dismiss a board member, a new meeting may be convened at which the resolution may be passed by an absolute majority of the votes cast, regardless of the proportion of the capital represented at the meeting.

ISS Governance QualityScore will consider the percentage of shares needed to cancel the binding nature of board or management nominations.

Market Applicability: W. Europe

Did the company have a slate ballot at its last shareholders’ meeting? (Q53)

Bundled, or slate, director elections provide shareholders with only a single vote for or against all of the nominees as a group. A shareholder who wishes to withhold support from a single director does not have the ability to do so when the company bundles director elections. Best practice is to provide a separate
ballot item for each director up for election. ISS Governance QualityScore will consider whether the company had bundled or individual elections at the most recent shareholder meeting with election of directors.

› In the Italian market, this factor takes into account the statutory requirements of voto di lista slate board renewals. This factor considers if directors were proposed via management’s slate ballot or the shareholder’s slate ballot.

Market Applicability: W. Europe, Germanic, Latin America, South Korea

How many vacancies are on the board? (Q262)

› There are vacancies on the board if the current number of directors is less than the maximum number of directors allowed under the company’s bylaws. If there are vacancies on the board and the board has not declared "no vacancy" (subject to provisions of the Australian Corporations Act), it is easier for shareholder nominated candidates to be elected to the board.

› ISS Governance QualityScore will consider the maximum number of board seats provided in the company's constitution minus the current number of directors on the board.

Market Applicability: Australasia, Japan

What is the percentage of share capital needed to convene a special meeting? (Q97)

› Most U.S. state corporation statutes allow shareholders to call a special meeting when they want to take action on certain matters that arise between regularly scheduled annual meetings. Generally, this right applies only if a shareholder or group of shareholders owns a specified percentage of the outstanding shares. In terms of day-to-day governance, shareholders may lose an important right – the ability to remove directors or initiate a shareholder resolution without having to wait for the next scheduled meeting – if they are unable to call a timely special meeting. Shareholders could also be powerless to respond to a beneficial offer if a bidder cannot call a special meeting. Therefore, the inability to call a special meeting and the resulting insulation of management may result in the decline of corporate performance and shareholder returns.

› ISS Governance QualityScore will consider whether shareholders can call a special meeting, and, if so, the ownership threshold required.

Market Applicability: U.S., W. Europe, Canada

Can shareholders act by written consent? (Q98)
Consent solicitations can be advantageous to both shareholders and management in that the process does not involve the expense of holding a physical meeting, and it is easier for shareholders who can simply respond to the proposal by mail. A consent solicitation is similar to a proxy solicitation: consents are mailed to shareholders for their vote and signature and delivered to management. The differences are that 1) there is no physical meeting, 2) a consent period (generally 60 days) is set for the delivery of the consents, and 3) as soon as the threshold level of consents are delivered, the proposals are deemed ratified and the consent solicitation ends. In contrast, a proxy solicitation must end with a meeting because proxy cards merely authorize the indicated "proxy" to cast a vote at a shareholder meeting. A signed consent card is itself the final vote and, as such, does not require a vote by proxy at a shareholder meeting.

Limitations on written consent are generally considered contrary to shareholder interests. In terms of day-to-day governance, shareholders may lose an important right – the ability to remove directors or initiate a shareholder resolution without having to wait for the next scheduled meeting – if they are unable to act by written consent. Beneficial tender offers also may be precluded because of a bidder’s inability to take action by written consent.

ISS Governance QualityScore will consider whether shareholders can act by written consent, or if the information is not disclosed. Companies that mandate unanimous written consent maintain a practice that increases concern.

Market Applicability: U.S., Canada

**Has the company employed a show of hands at the last general meeting? (Q357)**

- Under Australian law, a company may call a vote to be conducted by either a ‘show of hands’ or by poll.
- Whereas a poll attributes one vote to each share held, voting on a ‘show of hands’ attributes one vote to each shareholder, irrespective of the number of shares held.
- Voting on this basis goes against the principle of one vote one share, which is integral to shareholder democracy.
- This question evaluates whether the company adheres to the basic corporate governance principle of one share one vote.

Market Applicability: Australasia

**Does the company use cumulative voting for director elections? (Q338)**

- Under cumulative voting, once the General Assembly fixes the board size, shareholders may focus all of their votes on one or more candidates. The nominees receiving the most votes comprise the new board. Under article 141 of Brazilian Corporate Law, shareholders must request cumulative voting at least 48 hours prior to the meeting date. Shareholders must also have 5 percent of share capital to request cumulative voting (this percentage is based on share capital; smaller companies have higher thresholds.)
Market Applicability: AsiaPac, South Korea

Does the company have a majority vote standard in uncontested elections? (Q52)

- A majority vote standard requires that, for directors to be elected (or reelected) to serve on the company's board, they must receive support from holders of a majority of shares voted. A plurality standard only requires the most votes, meaning a director nominee in an uncontested election can be elected to the board with, in theory, a single vote.
- A majority vote standard, in combination with a plurality standard in elections with more nominees than seats, and a director resignation policy to address post-election results, has emerged in the U.S. as a way to make director elections meaningful rather than merely symbolic, and is considered best practice: shareholders have a clear, legally significant vote, and the board retains the ability to address the situation of "holdover" directors to accommodate both shareholder concerns and the need for stability and continuity of the board.
- In the U.S., a “majority vote policy” is a term sometimes used to describe a director resignation policy, which is the post-election process to be followed if a director does not receive a majority of votes cast. Such resignation policies are usually found in a company’s corporate governance guidelines, and can accompany either a majority or a plurality vote standard. It is not the same as a majority vote standard.
- While majority voting, by itself, does not address the holdover situation if a director fails to get majority support, the director in question is still not legally "elected." This is true even if the director tenders his/her resignation and the board rejects it; that director was not "elected" to the board. On the other hand, plurality voting lacks teeth: the incumbent director still determines whether to tender his or her resignation. Even if the company has a director resignation policy with the plurality standard, if the board does not accept the resignation, the director who did not garner majority support is still legally considered "elected."
- In Canada, all non-controlled reporting issuers listed on the Toronto Stock Exchange are subject to the TSX majority voting director resignation policy. The TSX rule requires that each director of a listed issuer must be elected by a majority of the votes cast other than at contested meetings. The vote result for any director receiving less than majority support must be disclosed to the TSX, which has made clear that except in extraordinary circumstances, the expectation is that the director's resignation will be accepted by the board and disclosed within a 90-day period following the meeting.

ISS Governance QualityScore will consider the voting standards for electing directors to the board.

Market Applicability: U.S., Canada

If the company has a majority voting policy in director elections, does a plurality standard apply for contested elections? (Q343)

- Best practice calls for a majority vote standard in uncontested director elections, and a plurality vote standard in contested elections. Otherwise, in a contested election, even if a dissident nominee receives...
more votes than a management nominee, the management nominee would be seated. ISS Governance QualityScore will consider as to whether the majority voting standard – if in place – does not apply in the case of contested elections.

Market Applicability: Canada

- **Are there material restrictions as to timing or topics to be discussed or ownership levels required to call the meeting? (Q225)**

  - ISS Governance QualityScore will consider whether there are material restrictions to the right to call a special meeting of shareholders. Material restrictions include: restrictions that prohibit special meetings more than 90 days away from the prior (or planned future) annual meeting date, restrictions that may be interpreted to preclude director elections or other significant business, and restrictions that effectively raise the ownership threshold required to call the meeting.

  Market Applicability: U.S.

- **Is the quorum for shareholders’ meetings at least two persons representing at least 25 percent of the outstanding shares? (Q101)**

  - Shareholder meetings should only convene with a minimum acceptable level of attendance, thereby eliminating any shareholder resolutions that may be passed in a meeting with insufficient shareholder representation.

  - ISS Governance QualityScore will consider whether quorum requirements are at least two persons representing 25 percent of outstanding shares, or if requirements are less than two persons and/or representing 25 percent of outstanding shares. ISS Governance QualityScore also will consider if the company has a controlling holder who meets or exceeds quorum requirements.

  Market Applicability: Canada

- **Did the company file its proxy materials late in the past year? (Q335)**

  - Relevant proxy materials should be disclosed in a timely manner well in advance of the general meeting to allow for a meaningful shareholder review.

  - ISS Governance QualityScore will consider whether the timing of the filing of proxy materials meet local best practice. The assessment is based on when a company should be disclosing materials, not the minimum required under the local regulations.

  Market Applicability: AsiaPac, Russia, South Korea, India
How many days before the general meeting did the company publish its proxy materials? (Q371)

› Company should publish proxy material as early as possible before the meeting date in order to provide for ample time for shareholders to review and evaluate them and make informed voting decisions.

Market Applicability: Japan

Does the company provide proxy materials in English? (Q373)

› Access to information is integral to exercise of ownership rights. A significant number of companies in Japan, however, discloses proxy materials in Japanese only, creating hurdles for foreign investors to make an informed voting decision. Making English proxy materials readily available to investors is considered a best practice.

Market Applicability: Japan

Does the company disclose the policy on cross-shareholding, including voting policy for such shares, in compliance with the Japanese Corporate Governance Code 1-4? (Q370)

› Cross-shareholding structures, which tend to lock up control among long-standing business partners or fellow companies in a conglomerate, are common in Japan. In general, selling cross-shareholdings will be good for broader equity market, reducing management entrenchment, offering possible improvements in capital efficiency, putting more shares in the public’s hands and supporting merger-and-acquisition activity.

› New Japanese Corporate Governance Code (1-4) encourages companies to evaluate economic benefits and risks of cross-shareholdings and to establish a policy on managing such equity positions.

Market Applicability: Japan

Does the company hold its general meeting on a peak date? (Q287)

› Many Japanese companies hold their annual shareholder meeting in the last few days of June, usually with an overwhelming concentration on one or two days. Investors have asked companies not to hold shareholder meetings on this June "peak" date. Similarly in South Korea most companies hold their general meeting on two days in March.

Market Applicability: Japan, South Korea
Does the company collaborate with intermediaries to accommodate beneficial owners to attend shareholder meetings in compliance with the Japanese Corporate Governance Code 1-2-5? (Q372)

All shareholders, whether registered in the company’s shareholder registry or holding shares through custodian accounts, should have the right to attend general meetings. The Japanese Corporate Governance Code (1-2-5) encourages more active participation by shareholders at general meetings, and discourages companies from restricting beneficial owners’ participations.

Market Applicability: Japan

Does the company participate in an electronic voting platform? (Q374)

The Tokyo Stock Exchange (TSE) and Broadridge Financial Solutions, Inc. (Broadridge) have established an "Electronic Voting Platform for Foreign and Institutional Investors," and started operation of the platform from companies with 2005 December year-end. Use of the electronic voting platform affords greater voting flexibility for investors as the voting deadlines could be significantly reduced and investors could relatively easily change their voting decisions close to the meeting date. Currently more than 700 companies have already agreed to participate in the platform.

Market Applicability: Japan

Does the company have an exclusive venue or forum provision? (Q351)

Exclusive venue provisions restrict shareholder litigation against the company to a limited number of jurisdictions. The most common venue chosen is the state of incorporation, though some companies have chosen other venues, such as the state or county where the company is headquartered. The rationale is to limit potential litigation costs by preventing similar lawsuits in multiple states, and to have the cases heard by judges most familiar with the applicable state law. However, these are restrictions on shareholders’ rights, and, in the absence of past harm, it is not always clear the restrictions are justified.

Market Applicability: U.S.

Does the company have a fee-shifting provision? (Q363)

Fee-shifting provisions provides for the shifting of litigation expenses to an unsuccessful plaintiff who does not obtain a judgment on the merits that substantially achieves the full remedy sought. Broad provisions and scope may dissuade shareholders from pursuing meritorious legal action against the company due to the significant financial hurdles imposed. They also violate the ordinary American practice where each party is responsible for its own litigation costs.
For Delaware-incorporated companies, the Delaware General Corporation Law was amended in 2015 to invalidate fee-shifting bylaws as they pertained to matters of Delaware law, but did not extend to matters under federal jurisdiction.

Market Applicability: U.S.

Does the company have a representative claim limitation or other significant litigation rights limitations? (Q364)

Representative claims provisions require that a minimum level of support is required for a shareholder to initiate a lawsuit against the company. The aim is to prevent frivolous lawsuits brought by shareholders with small stakes, but the provisions do not distinguish between frivolous and meritorious lawsuits, and prevent small shareholders, unless banded together, from suing the company.

Limitations on shareholders’ litigation rights continue to proliferate. As other types of limitations emerge, they will be captured in this datapoint as well.

Market Applicability: U.S.

Does the company provide proxy access to shareholders? (Q346)

The ability of shareholders to nominate board directors in the company proxy along with management nominees (known as “proxy access” in the U.S.) is increasingly seen as a fundamental shareholder right. Companies can provide shareholders with this right through adoption of bylaw provisions, but they may limit or put restrictions on the right. Restrictions typically include limits on the proportion and duration of ownership required to be a nominator, the number of shareholders that may aggregate holdings to meet those thresholds, and the number of proxy access candidates that may be put forward.

This question will consider whether proxy access is provided, whether proxy access is required by regulation, and whether the proxy access bylaw includes problematic provisions that nullify it as a practical right for shareholders.

The “required by regulation” covers foreign-incorporated U.S. Domestic Issuers subject to rules allowing shareholder nominations due to their jurisdiction of incorporation. For example, U.K. incorporated companies are subject to rules that allow shareholders owning 5% of shares to nominate directors. These requirements differ from proxy access bylaws adopted voluntarily in the U.S. that generally follow the SEC’s vacated Rule 14a-11 formulation, yet they still provide mechanisms for shareholder access to the ballot.

Inclusion of problematic provisions, such as: counting different mutual funds under common management as separate shareholders under the aggregation limits; requiring nominating shareholders to pledge to hold their shares past the date of the meeting; providing the board with broad and binding authority to interpret the provision; or combinations of other problematic provisions that are deemed sufficient to nullify the proxy access right will cause no credit to be given for the adoption of a proxy access bylaw.
What is the ownership threshold for proxy access? (Q359)

This proxy access provision is the ownership threshold that needs to be met by the proxy access nominating group, as measured as the ownership over the total voting power of a company’s securities entitled to vote in the election of directors. A threshold is needed to be set to ensure shareholders have sufficient investment in the company, but the level should not be too high to prevent shareholders from being able to use the right. Most companies in the U.S. have adopted the vacated SEC Rule 14a-11 formulation of 3% of the voting power as favored by investors.

What is the ownership duration threshold for proxy access? (Q360)

This provision is the holding requirement of continuous ownership for each member of the proxy access nominating group. This ensures that the nominators are long-term shareholders. The SEC formulation of a minimum of 3 years of ownership has found acceptance among investors and companies. Longer holding period requirements are considered excessive.

What is the cap on shareholder nominees to fill board seats from proxy access? (Q361)

Proxy access is not designed to allow a change of control, thus, a maximum is placed on the number of board seats that can be filled by proxy access nominees each year. Under the SEC formulation, this percentage was set at 25%. Generally, investors have approved a range of 20% to 25% of the board. Many companies have adopted a “greater of 2 persons or 20%” standard.

What is the aggregation limit on shareholders to form a nominating group for proxy access? (Q362)

This provision concerns any restriction on the number of shareholders permitted to join together to form the nominating group to achieve the necessary ownership threshold. The vacated SEC rule had no limit on the number of shareholders permitted. However, many investors (not all) have permitted a reasonable, minimal limitation, one that balances the administrative needs of companies vs. the difficulty of achieving
the ownership threshold. A limitation of no fewer than 20 shareholders has generally been considered a minimal restriction.

Market Applicability: U.S.

Other Shareholder Rights Issues

Are there related party transactions (RPTs) with significant shareholders? (Q263)

› Related-party transactions with a significant shareholder as of the annual meeting can represent guaranteed business which can help to justify significant investments, but can also "crowd out" transactions with unrelated parties which may be more profitable for the company.
› ISS Governance QualityScore will consider whether the company has RPTs with its major shareholder. Major shareholder and reportable transactions are generally defined by the relevant stock exchange.

Market Applicability: AsiaPac, Australasia, Latin America, Russia, South Korea, India

Can the board materially modify the company's equity capital structure without shareholder approval? (Q352)

› Companies generally are required to put authorized capital increases or reduction to a shareholder vote, as such changes represent significant potential dilution of shareholder value.
› Through a specific charter provision, Maryland-incorporated companies have the ability to increase/decrease authorized capital without a shareholder vote.

Market Applicability: U.S.

Has the company entered into a private placement in the past year without an accompanying share purchase plan (SPP)? (Q356)

› A private placement offers certain individuals or institutional investors the opportunity to purchase shares in a company at a discount to the current market price. By using an SPP, a company provides all existing shareholders with an opportunity to purchase additional shares on the same terms, as that offered under the private placement.
› Offering shares at a discount to a select group of investors has the potential to dilute wealth, and erode value, of non-participating shareholders. However, where a company uses an SPP, all shareholders are provided with an opportunity to participate, which reduces the potential for dilution.
› This question therefore gauges the extent to which the company creates safeguards to protect interests of existing shareholders from dilution.
Market Applicability: Australasia

What is the dilution limit of the general mandate to issue shares? (Q318)

ISS Governance QualityScore will consider the maximum proportion of shares which can be issued under a general mandate approved at the general meeting.

Market applicability: AsiaPac, Australasia, South Korea, India

What is the discount limit of the general mandate to issue shares? (Q319)

ISS Governance QualityScore will consider the maximum discount limit applied on the market price of shares which can be issued under a general mandate approved at the general meeting.

Market applicability: AsiaPac, Australasia, India

What is the dilution limit of the general mandate to issue repurchased shares? (Q320)

ISS Governance QualityScore will consider the maximum proportion of repurchased shares which can be issued under a general mandate approved at the general meeting.

Market applicability: AsiaPac

What is the aggregate dilution limit of share issuance and reissuance mandate? (Q321)

ISS Governance QualityScore will consider the maximum aggregate proportion of shares which can be issued under the general issuance and reissuance mandate approved at the general meeting.

Market applicability: AsiaPac
Audit & Risk Oversight

External Auditor

Non-Audit fees represent what percentage of total fees? (Q1)

- The practice of auditors providing non-audit services to companies can prove problematic. While large auditors may have effective internal barriers to ensure that there are no conflicts of interest, an auditor's ability to remain objective is questionable when fees paid to the auditor for non-audit services, such as management consulting and special situation audits, exceed the standard annual audit fees. While some compensation for non-audit services is customary, the importance of maintaining the independence of the auditor is paramount, and an important gauge for that is the portion that non-audit fees comprise of total audit fees.
- This question will evaluate whether non-audit fees constitute a majority of fees paid to the company's external auditor.
- Audit Fees consist of all fees necessary to perform the audit or review, which include: statutory audits, comfort letters/due diligence, attest services, consents, review of filings, financial statement audit and review. The following are considered as audit-related fees: assurance and related services, employee benefit plan/audits, due diligence related to mergers and acquisitions, audits in connection with acquisitions, internal control reviews, consultation on financial accounting and reporting standards. Other Fees includes tax fees in general, tax services, review of tax laws, tax restructuring, tax planning - excludes fees resulted from one-time capital structure events, initial public offerings (IPOs), bankruptcy emergence, and spinoffs, review of net operating losses, tax assistance for potential transactions sales and use tax examinations, and other fees that cannot be categorized under the three classifications.
- Audit fees will be deemed “Not Disclosed” if audit fees paid to the auditor are not itemized or not disclosed.

Market Applicability: All regions except Japan

What is the tenure of the external auditor? (Q347)*

- Auditor tenure is the length of the auditor-client relationship. Some academic studies found limiting auditor tenure may ensure auditor independence, reduce the audit failure risks and protect audit quality. The Sarbanes-Oxley Act of 2002 requires the periodic rotation of certain key audit firm staff, but some investors seek the rotation of the audit firm itself to ensure auditor independence. This must be balanced against the additional expenses involved and the limited number of audit firms in the US.
- If multiple external auditors exist, the one identified as the primary is evaluated for U.S. companies, while the one with the longest tenure is evaluated for Anglo companies.
- This factor has a zero-weight impact on the scoring model and is included for informational purposes only.
Market Applicability: All regions (all unscored) except France, Japan, and China

Did the auditor issue an adverse opinion in the past year? (Q2)

- Auditor opinion reports are critical to ensuring a company’s financials are presented correctly and free of material misstatements. In the U.S., an “adverse” auditor opinion is when the auditor believes that no part of the company’s financial statements should be relied on. A “qualified” auditor opinion is when the auditor believes that in general the financial statements can be relied upon with certain exceptions. An “unqualified” opinion is the best.
- This question will evaluate whether a company received an adverse opinion from its auditor, having received either an Unqualified opinion, Qualified opinion, Adverse opinion, Emphasis of matter, or Going Concern determination.

Market Applicability: All regions

Does the company have a policy on evaluating competency and independence of the external auditor in compliance with the Japanese Corporate Governance Code 3-2-1? (Q365)

- An external audit firm performing auditing services should not only have necessary competencies and skills to perform the audit but also maintain high degree of independence. Companies should put in place a formal policies and processes to routinely review the independence and effectiveness of the auditor as recommended under the Japanese Corporate Governance Code (3-2-1).

Market Applicability: Japan

Audit and Accounting Controversies

Has the company restated financials for any period within the past two years? (Q3)

- Companies may restate their financials due to misrepresentation or accounting irregularities, for example, or, in other cases, due to clerical errors in the production of financial statements or business combinations or a change in accounting policies. ISS Governance QualityScore will consider the former, focusing on those restatements that pose a material risk to shareholders and/or stakeholders. Restatements can result in significant reputational, legal, and financial risks.
- When determining if a company has a material restatement, ISS’ guidelines are:
  - Has the company restated financial results for any period during the past 24 months (this refers to when the company restated its financial statements, not the period restated);
Did the restatement cause material changes (whether positive or negative) to the financial statements? Possible exceptions to the rule would be industry-specific issues, such as poor inventory control in a manufacturing/industrial company or poor asset valuations for financial institutions;

Include announced restatements that are being made to correct material misstatements of previously reported financial information;

Exclude announcements involving stock splits, changes in accounting principles (rule changes), and other restatements that were not made to correct mistakes in the application of accounting standards;

Revisions and restatements linked to a material weakness are considered material.

Some examples of restatements that are generally excluded:

- Those resulting from mergers and acquisitions;
- Discontinued operations;
- Stock splits, issuance of stock dividends;
- Currency-related issues (for example, converting from Japanese yen to U.S. dollars);
- Changes in business segment definitions;
- Changes due to transfers of management;
- Changes made for presentation purposes;
- General accounting changes under generally accepted accounting principles (GAAP); and
- Litigation settlements.

This question will evaluate whether, in the past two years, the company has restated its financials for any period, or if the information is not disclosed.

Market Applicability: U.S., Canada, South Korea

Has the company made non-timely financial disclosure filings in the past two years? (Q4)

Non-timely financial filings could result in penalties for the issuer and could be indicative of internal process or control issues.

ISS Governance QualityScore will consider whether the company filed non-timely filings in the past two years, or there is no disclosure to indicate it has done so. In the U.S., any “NT” SEC filing is considered evidence of non-timely filings.

Market Applicability: U.S., Canada, Japan, South Korea

Has the company filed belatedly its Annual Report for the most recent fiscal year? (Q302)

This question will evaluate whether the company filed its Annual Report on time for the most recent fiscal year. Late financial filings could result in penalties for the issuer and adversely impact the company’s reputation and shareholder value.
ISS Governance QualityScore
Overview and Updates

Market applicability: AsiaPac, India, South Korea

Has a regulator taken enforcement action against the company in the past two years? (Q5)

- Regulatory enforcement actions could result in significant penalties for the issuer and adversely impact the company’s reputation and shareholder value. Enforcement action covers a wide breadth of circumstances, for example, freezing of a company’s assets, fines, probationary periods of any sort, or any other action taken by any regulatory body under any jurisdiction in which the company operates.
- This question will evaluate whether a company was subject to enforcement action by a regulator within the past two years. For the US market, ISS will also analyze if the investigation was resolved with a material penalty. For non-US markets, most enforcement actions by regulators within the past two years are considered.
- In assessing the materiality of any penalties, ISS Governance QualityScore will consider the nature of the underlying investigation(s), the size of any monetary penalties, both on an absolute basis and relative to certain financial metrics, including but not limited to, revenues, earnings, cash flows, and market value, as well as any non-monetary penalties or requirements. Settlement agreements with regulatory bodies are also considered, even if the company denies the allegations underlying the investigation.

Market Applicability: All regions

Has a regulator initiated enforcement action against an officer or director of the company in the past two years? (Q200)

- Enforcement actions could result in significant penalties for the issuer and adversely impact the company’s reputation and shareholder value.
- This question will evaluate whether a director or officer was subject to enforcement action by a regulator within the past two years, including enforcement actions related to employment or board service at other firms. ISS will also analyze if the investigation was resolved with a material penalty. In assessing the materiality of any penalties, ISS Governance QualityScore will consider the nature of the underlying investigation(s), the size of any monetary penalties, as well as any non-monetary penalties or requirements. In the U.S., in general, any penalty against an individual is considered material. Settlement agreements with regulatory bodies are also considered, even if the director or officer denies the allegations underlying the investigation.

Market Applicability: U.S., Canada, AsiaPac, South Korea, India

Is the company or any of its officers or directors currently under investigation by a regulatory body? (Q201)
Disclosed investigations indicate the potential for controversy that could result in enforcement actions, significant penalties for the issuer, and adverse consequences for the company’s reputation and shareholder value.

This question will evaluate whether the company, or any of its directors or officers, is currently under investigation by a regulatory body. ISS will categorize investigations as either routine or non-routine. FCPA-related investigations and Wells Notices are generally considered to be non-routine investigations, unless the company states that it does not expect the outcome to have a material adverse effect on the company. Non-routine will also include investigations which raise serious ethical concerns or pose potential risk to the broader financial system (LIBOR manipulation, mortgage fraud, high frequency trading, or other serious one-off investigations).

The following types will generally be considered "routine", unless there is indication that they involve major fraud or risk:
- Promotion, marketing or sale of products" and "billing/false claims;"
- Accounting (unless tied to a restatement); and
- Civil investigation demands.

Market Applicability: U.S., AsiaPac, South Korea, India

Has the company disclosed any material weaknesses in its internal controls in the past two fiscal years? (Q8)

Companies with significant material weaknesses potentially have ineffective internal controls, which may lead to inaccurate financial statements, hampering shareholders’ ability to make informed investment decisions, and may lead to a weakening in public confidence and shareholder value.

ISS Governance QualityScore will evaluate and consider material weaknesses over the past two fiscal years and whether they were evidenced in the most recent year; in the previous year; in consecutive years; if all material weaknesses were fully remediated; or if the information is not disclosed.

Market Applicability: U.S., Canada, Japan, Anglo, Africa, India

Other Audit issues

How many financial experts serve on the audit committee? (Q6)

Those deemed financial experts must possess accounting and audit skills. Local best practice requirements or rules detailing specific criteria will apply for the relevant jurisdictions. For example, Germany’s governance code calls for the chair of the audit committee to possess specialist knowledge and experience in the application of accounting principles and internal control processes. The Dutch corporate governance code, meanwhile, is similar but not the same, suggesting that at least one member of the supervisory board
shall be a financial expert with relevant knowledge and experience of financial administration and accounting for listed companies or other large legal entities. In some markets, best practice also recommends that the financial expert be independent.

This question will evaluate whether the company has indicated a member on the audit committee with sufficient financial skills in audit and accounting. A member of the Audit Committee is considered a financial expert if he/she is or was a chief financial Officer, chartered accountant, certified management accountant, fellow chartered accountant (FCA), fellow certified practicing accountant (FCPA), or partner of an accounting firm. In the US and Canada, ISS Governance QualityScore will include the financial expert(s) disclosed by the company.

For Canada, QualityScore understands that the concept of a “financial expert” pertains mainly to companies subject to U.S. filing requirements. Companies with “financially literate” audit committee members will receive maximum credit.

In the U.S. this factor evaluates companies with zero, one, two or more financial experts sitting on the audit committee.

Market Applicability: US, Canada*, Anglo, W. Europe, Germanic, S. Europe (Portugal*), Nordic*, Australasia, AsiaPac, S. Korea, Latin America, Africa, and India.

Has the company changed its audit firm without a valid reason in the past two fiscal years? (Q288)

Best practice dictates that a company to provide a valid reason for an auditor change.

This question will evaluate whether the company gave a valid explanation for changing its audit firm in the past two fiscal years.

Market Applicability: Japan, AsiaPac, Latin America, and India

Can the audit firm be indemnified without shareholder vote? (Q280)

Some companies allow the board to indemnify the audit firm without shareholder vote. Institutional investors typically argue that such indemnification should be subject to a shareholder vote and not left solely to board discretion.

ISS Governance QualityScore will consider whether audit firms can be indemnified without shareholder votes.

Market Applicability: Japan
Appendix I: Event-driven Data Updates

Much of the information included in ISS Governance QualityScore comes from the annual filing of companies’ proxies, annual reports, 10-Ks, circulars, meeting notices, and other meeting related materials for the companies’ AGM. In addition, ISS’ data and research teams’ analyses, interpretations, and proxy voting recommendations to our clients for these shareholder meetings also provide information for ISS Governance QualityScore. While companies have the ability most of the year to submit changes to ISS Governance QualityScore answers, this ability is restricted between the dates when the company files its proxy or meeting materials and the publication of ISS’ proxy analysis for the company’s annual meeting. During the blackout period, the company’s online ISS Governance QualityScore profile and data is frozen and does not reflect the latest information being gathered for the proxy analysis. Once the proxy voting recommendations report is published and released to ISS’ clients, companies are able once again to review their ISS Governance QualityScore data profiles and provide updates through the Data Verification tool.

Online ISS Governance QualityScore profiles are updated once daily, at approximately 5am ET (10am UTC). Therefore, when the ISS proxy analysis is released containing the updated ISS Governance QualityScore scores, the online website may not yet reflect the updated scores and profile. The online score and profile will be updated the next day.

During the year outside of the annual meeting, ISS reviews new filings to keep ISS Governance QualityScore up to date, incorporating changes to bylaws, adoptions and redemptions of poison pills, and other events. Two categories of such updates are accorded special treatment in ISS Governance QualityScore:

Classification of Newly-Appointed Directors

ISS will monitor 8-K filings for new director disclosures, such as new directors being appointed to the board, or incumbent directors leaving the board. In general, the standard 8-K disclosure is insufficient for ISS to determine if the new director is independent under ISS’ classification. However, if the company provides sufficient disclosure, ISS may make a preliminary determination (for ISS Governance QualityScore purposes) of the director’s ISS classification. This classification is tentative and subject to change once the full disclosure on the director is available in the proxy.

If ISS is unable to make a preliminary determination of the newly appointed director’s classification based on a company's disclosure, ISS will consider the director “unclassified” until there is sufficient information to determine the classification. In such a case, the company’s board percentages, including board independence, committee independence calculations, and percentage of directors that are family members or with related party transactions, are frozen at the calculated values based on the last complete disclosures. When all directors have been classified as either independent or otherwise, the calculation will be updated to reflect these changes.
For ISS to be able to make the preliminary determination of whether a newly appointed director is independent under ISS standards, the following minimum information on the director (perhaps in the form of a short biography) is required:

1. Current position;
2. The company’s determination of whether the director is independent under its listing standards;
3. Any previous employment at the company;
4. Any familial relationships with the company’s executives or directors;
5. Any transactions (per Item 404a of Regulation S-K) between the director, the director’s employer, or the director’s immediate family member’s current employer, and the company in the last fiscal year.
# Appendix II: ISS Governance QualityScore Factor Methodology and Region Applicability

X  Indicates the factor is applicable to all countries in a given region  
Y Indicates the factor is applicable to some countries in a given region  
★ Indicates the factor has zero-weight impact on the scoring model and is for informational purposes only

Addendum

› November 24, 2014: Updated text for question 99, which was noted inconsistently in the document and in the appendices. The factor is, “Has the board adequately addressed a shareholder resolution supported by a majority vote? (Q99).”
› November 24, 2014: Updated the text for question 130, based on ISS 2015 policy updates. The factor is, “Does the company’s equity grant rate exceed the mean plus one standard deviation of its industry/index peers? (Q130).”
› November 24, 2014: Additional note is provided for question 41 regarding the performance evaluation of the board for U.S. companies.
› November 24, 2014: The factors considered under the Pay for Performance subcategory are scored based on the ISS 2015 Policy Updates. Note is added to questions 228, 229 and 329.
› November 24, 2014: Additional information on the scoring in the Audit & Risk Oversight category is included.
› November 24, 2014: Removed Canada from the Market Applicability section in the factor description of question 201.
› November 24, 2014: Removed the reference to “Vote Results” in Appendix I, as the “in progress” consideration of vote result collection is noted in the factor description in the document for questions 49, 312 and 328.
› November 24, 2014: Added explanation under Majority Vote Standard, question 52, how a “Majority Vote Policy” in the U.S. is not equivalent to a majority vote standard. Clarified application in Canada.
› November 24, 2014: Removed question 21 from the text, “Are there employee representatives on the nominating committee?” as it is no longer analyzed in QuickScore 3.0.
› November 24, 2014: Corrected text on question 288 from three fiscal years to two fiscal years, added Asia-Pacific region.
› May 26, 2015: Removed question 342 for South Korea regarding the availability of proxy material in English.
› October 30, 2015: Updated text on coverage in the 1st paragraph regarding the coverage of QuickScore.
› October 30, 2015: Updated text on “Summary of Updates in QuickScore 3.0” to reflect the updated methodology.
› October 30, 2015: Removed tables and replaced with text of the new factor on proxy access.
› October 30, 2015: Updated text on “Other notable QuickScore 3.0 updates” and 7 to reflect the updated methodology.
› October 30, 2015: Added a paragraph outlining the difference in standards between FTSE 350 companies in UK and ISEQ 20 companies in Ireland and the remaining companies in the Anglo region in terms of independence.
October 30, 2015: Added a paragraph outlining the difference in standards between constituents of the different listing segments in Brazil in terms of independence.

October 30, 2015: Added W. Europe to the market applicability section in the factor description of question 11.

October 30, 2015: Added further explanation in the first paragraph of the factor description on Q212 outlining the difference in standards between FTSE 350 companies in UK and ISEQ 20 companies in Ireland and the remaining companies in the Anglo region.

October 30, 2015: Added further explanation in the first paragraph of the factor description on Q213 outlining the difference in standards between FTSE 350 companies in UK and ISEQ 20 companies in Ireland and the remaining companies in the Anglo region.

October 30, 2015: Removed reference to previous threshold in the second paragraph of the factor description on Q312.

October 30, 2015: Added a sentence in the last paragraph of the factor description on Q143 for Australia taking into account significant share ownership of directors.

October 30, 2015: Removed date reference in the last paragraph of the factor description on Q228.

October 30, 2015: Removed date reference in the last paragraph of the factor description on Q229.

October 30, 2015: Removed date reference in the last paragraph of the factor description on Q329.

October 30, 2015: Removed question 158 from the text, “Did the company disclose a performance overview for its long-term incentive plans?” as it is no longer analyzed in QuickScore 3.0.

October 30, 2015: Removed S. Europe from the market applicability section in the factor description of question 153.

October 30, 2015: Added Canada to the market applicability section in the factor description of question 77.

October 30, 2015: Moved factor description of question 52.

October 30, 2015: Added Canada to the market applicability section in the factor description of question 89.

October 30, 2015: Added Canada to the market applicability section in the factor description of question 90.

October 30, 2015: Removed S. Europe from the market applicability section in the factor description of question 53.

October 30, 2015: Added Canada to the market applicability section in the factor description of question 97.

October 30, 2015: Added Canada to the market applicability section in the factor description of question 98.

October 30, 2015: Moved factor description of question 225.

October 30, 2015: Added new factor description on question 346 on proxy access.

October 30, 2015: Updated information on the US in the factor description on Q45.
October 30, 2015: Removed sentence in the last paragraph on the US in the factor description on Q228.
October 30, 2015: Removed sentence in the last paragraph on the US in the factor description on Q229.

November 2018: Q370 Updated question text to clarify: Does the company disclose the policy on cross-shareholding, including voting policy for such shares, in compliance with the Japanese Corporate Governance Code 1-4?

November 2018: Q371 Updated question text to clarify: How many days before the general meeting did the company publish its proxy materials?

November 2018: Q375 Updated question text to clarify: Does the company have performance-based pay or other incentives for its executives?

November 2018: Q376 Updated question text to clarify: Does the company have a policy on executive remuneration and a computation basis for pay?

November 2018: Q382 Updated question text to clarify: What percentage of the audit committee is independent based on an ISS global classification?

November 2018: Q383 Updated question text to clarify: What was the lowest percentage of vote support received by management-nominated directors at their most recent annual meeting?

November 2018: Q385 Updated question text to clarify: What was the percentage of vote support received from shareholders on the most recent Say-on-Pay or remuneration proposal?
November 2018: Q353 explanation text updated to include: *Metrics are considered if the metric falls above the thresholds of deereining either 15% of the overall compensation, or as a modifier able to adjust payouts both positively and negatively by at least 15%.*

November 2018: Q263 explanation text updated to: *Related-party transactions with a significant shareholder, as of the annual meeting, can represent guaranteed business which can help to justify significant investments, but can also "crowd out" transactions with unrelated parties which may be more profitable for the company.*

November 2018: Q10 explanation text updated to: *Best practice suggests that at least 70% of the shareholder-elected board should be independent of the company, of which at least two members should be independent of major shareholders.*

November 2018: Q10 explanation text updated to include: *For the African market, the question will consider the independence of non-executive directors.*

November 2018: Q14 explanation text updated to: *This question will consider the classification of the chair of the board according to ISS policy, outlining whether he / she is independent, an affiliated outsider, an executive, the Chair, an insider director other than Chair/President/CEO, a former or current President/CEO of the company, or if the chair of the board has not been appointed.*

November 2018: Q18 explanation text updated to: *This question addresses whether there is a position of a lead independent director with clearly delineated and comprehensive duties, and if the position is vacant.*

November 2018: Q5 explanation text updated to: *This question will evaluate whether a company was subject to enforcement action by a regulator within the past two years. For the US market, ISS will also analyze if the investigation was resolved with a material penalty. For non-US markets, all enforcement actions by regulators within the past two years are considered.*

November 2018: Q131 explanation text updated to: *The minimum vesting requirement must apply to Options and SARs issuable under the plan (time-based and performance based) and must cover all eligible plan participants for credit to be given. No credit will be given if the plan allows for individual award agreements or other mechanisms to eliminate the requirement.*

November 2018: Q132 explanation text updated to: *The minimum vesting requirement must apply to all types of full-value awards issuable under the plan (time-based and performance based) and must cover all eligible plan participants for credit to be given. No credit will be given if the plan allows for individual award agreements or other mechanisms to eliminate the requirement.*

November 2018: Q383 explanation text updated to: *This factor helps investors find companies where investors might have governance concerns, as evidenced by lower support for one of the management-nominated directors at their most recent annual general meeting (AGM). For Classified boards, the factor will report the lowest support for any sitting management-nominated director at their most recent election regardless if the election was at the company’s most recent annual general meeting.*
